中考英语完形填空：实验课的显微镜

完形填空原文

In our science class, we often do experiments. Last week, our teacher brought a microscope to the lab. It was the first time I had seen one so close. The teacher said we would use it to look at tiny things that our eyes can ***1*** see. I was very excited.

We put a drop of water under the lens. When I looked through the microscope, I was ***2***. There were so many small living things in just one drop of water! I never knew that such a small world existed. The teacher told us that these tiny creatures are everywhere around us. We just need the right ***3*** to find them.

From that day on, I became more interested in science. I started to ask more questions in class and read science books after school. The microscope taught me an important ***4***: there is always more to discover if we look carefully. Things that seem simple may hide amazing secrets.

I also learned that science needs patience. Sometimes we had to ***5*** the lens many times before we could see clearly. My classmates and I helped each other when we had problems. We shared what we saw and discussed our ***6***. Learning became more fun when we worked together.

Now I understand why our teacher loves the microscope. It opens a new ***7*** for us. It shows us that the world is full of wonder. I hope one day I can have my own microscope and ***8*** exploring the tiny world. Maybe I will become a scientist when I grow up. The microscope has given me a big ***9*** and made me more curious about the world. I am ***10*** for this wonderful lesson.
