Recyclable Plastics and Plastic Pollution

① Plastic is everywhere in our daily life. We use it for bottles, bags, and packaging. It is cheap and easy to make. But plastic also brings a serious problem—plastic pollution. Every year, millions of tons of plastic waste end up in the ocean and on the land. This harms animals, plants, and our environment.

② Not all plastics are the same. Some can be recycled, but others cannot. Recyclable plastics often have a small number on them. For example, bottles and food containers usually carry the numbers 1 or 2. These plastics can be collected and turned into new products. However, many people still throw recyclable plastic into the wrong bins. When plastic is mixed with other waste, it becomes harder to recycle.

③ Plastic pollution is dangerous because plastic does not break down easily. It can stay in the environment for hundreds of years. In the ocean, plastic harms sea animals. Fish and birds may eat small pieces of plastic by mistake. Some animals get caught in plastic bags and cannot move. Scientists say that by 2050, there might be more plastic than fish in the ocean if we do nothing.

④ What can we do to help? First, reduce the amount of plastic we use. Bring your own bags when you go shopping. Use a reusable water bottle instead of buying bottled water. Second, recycle correctly. Learn which plastics can be recycled in your city and put them in the right place. Third, never throw plastic on the ground or into rivers. Small actions can make a big difference.

⑤ Protecting our planet is everyone's job. When we choose to reduce, reuse, and recycle plastic, we are taking steps toward a cleaner and healthier world for future generations.

注释： recyclable 可回收的；packaging 包装；reusable 可重复使用的
