AI in Our Daily Life

① Artificial Intelligence, or AI, is no longer something from science fiction movies. Today, AI is everywhere in our daily life. From the moment we wake up to when we go to sleep, we may use AI without even noticing it. Smartphones, smart speakers, and many apps we use every day rely on AI technology. It helps us in ways that were impossible just a few years ago.

② Many people start their day by asking a smart speaker for the weather. "What will the weather be like today?" The speaker answers in seconds because AI understands your words and finds the right information. When you take a photo with your phone, AI helps to make the picture clearer. When you type a message, AI suggests the next words you might want to say. These small things make our life easier and save us time.

③ In the classroom, AI can also help students learn. Some learning apps can give different exercises based on each student's level. If a student finds maths difficult, the app may offer more practice and explain the steps more slowly. Teachers use AI tools to check homework faster, so they have more time to help students face to face. AI does not replace teachers; it works with them.

④ AI also helps in our homes. Smart TVs suggest shows you might like. Robot vacuum cleaners (吸尘器) know how to avoid furniture and clean the floor by themselves. Some families use AI to turn on lights, control the air conditioning, or lock the door with just a voice command. Life at home becomes more convenient.

⑤ Of course, we should use AI wisely. It is a useful tool, but we still need to think for ourselves and protect our privacy. As AI keeps developing, it will bring more changes to our lives. Understanding how it works helps us use it better and prepare for the future.
