11-03 第一篇

Sleep: Why Your Body Needs It

Most teenagers need about eight to ten hours of sleep each night, but many get far less. Homework, screen time, and social activities often keep young people awake late into the night. Yet sleep is not a luxury—it is a basic need. During sleep, the body repairs tissues, the brain organizes memories, and hormones that control growth are released. [1] Getting enough quality sleep is essential for physical health, mental sharpness, and emotional balance, making it one of the most important habits a young person can develop.

Sleep affects how well we learn and remember. When we sleep, the brain replays and strengthens the connections formed during the day. Students who sleep well before an exam tend to perform better than those who stay up all night studying. Lack of sleep makes it harder to concentrate, solve problems, and control emotions. [2] Research consistently shows that sleep is not wasted time but an active process during which the brain consolidates learning and prepares itself for the challenges of the next day.

Our bodies follow a natural rhythm called the circadian clock. This internal clock tells us when to feel sleepy and when to feel alert. Light plays a major role: sunlight in the morning helps us wake up, while darkness triggers the release of melatonin, a hormone that makes us drowsy. Screens emit blue light that can trick the brain into thinking it is still daytime. [3] Understanding how the circadian clock works explains why looking at phones or computers before bed can delay sleep and reduce its quality.

Poor sleep over a long period can lead to serious health problems. It increases the risk of obesity, weakens the immune system, and raises the chance of developing anxiety or depression. Athletes who do not sleep enough recover more slowly from injuries and perform worse in competitions. [4] The long-term consequences of sleep deprivation are far-reaching, affecting not just how we feel today but our overall health and well-being for years to come.

Improving sleep habits does not require major changes. Going to bed and waking up at the same time each day helps set the body's clock. Avoiding caffeine in the evening, keeping the bedroom cool and dark, and putting away screens an hour before bed all make a difference. [5] Small, consistent changes to daily routines can lead to significantly better sleep, helping young people feel more energetic, focused, and emotionally stable throughout the day.

选项

A. Getting enough quality sleep is essential for physical health, mental sharpness, and emotional balance, making it one of the most important habits a young person can develop. B. Research consistently shows that sleep is not wasted time but an active process during which the brain consolidates learning and prepares itself for the challenges of the next day. C. Understanding how the circadian clock works explains why looking at phones or computers before bed can delay sleep and reduce its quality. D. The long-term consequences of sleep deprivation are far-reaching, affecting not just how we feel today but our overall health and well-being for years to come. E. Small, consistent changes to daily routines can lead to significantly better sleep, helping young people feel more energetic, focused, and emotionally stable throughout the day. F. For example, NASA found that a short nap of about 26 minutes improved pilot performance by 34 percent and alertness by 54 percent.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前说青少年需8-10小时睡眠但常不足、作业屏幕社交影响、睡眠为基本需求——修复组织、整理记忆、释放生长激素，空后需概括充足睡眠的重要性。A的"essential for physical health, mental sharpness, and emotional balance"与前文身体修复、记忆整理对应，"most important habits a young person can develop"与青少年话题衔接。
- **[2] B**：
  - **线索**：空前说睡眠影响学习记忆——大脑回放强化连接、考前睡好表现更佳、缺觉影响注意力情绪，空后需总结睡眠对学习的价值。B的"sleep is not wasted time but an active process"与前文大脑活动呼应，"consolidates learning and prepares itself for the challenges of the next day"与考试表现对应。
- **[3] C**：
  - **线索**：空前说昼夜节律——内部时钟控制困倦与清醒、光线作用、阳光助醒、黑暗触发褪黑素、屏幕蓝光欺骗大脑，空后需总结蓝光影响睡眠的机制。C的"Understanding how the circadian clock works"承接前文节律概念，"looking at phones or computers before bed can delay sleep"与"screens emit blue light"直接对应。
- **[4] D**：

- **线索**：空前说长期睡眠不足的健康问题——肥胖风险、免疫力下降、焦虑抑郁、运动员恢复慢表现差，空后需总结睡眠不足的深远影响。D的"long-term consequences of sleep deprivation are far-reaching"概括前文多种健康问题，"affecting not just how we feel today but our overall health and well-being for years to come"升华主题。

- **[5] E**：
  - **线索**：空前说改善睡眠不需大变——固定作息、避免咖啡因、保持卧室凉暗、睡前远离屏幕，空后需总结这些小改变的效果。E的"Small, consistent changes to daily routines"与前文具体建议呼应，"significantly better sleep... more energetic, focused, and emotionally stable"是全文收尾。

- **干扰项分析**：
  - **F. For example, NASA found that a short nap of about 26 minutes improved pilot performance by 34 percent and alertness by 54 percent.**：以For example开头，为具体研究案例（NASA午睡实验）。各空均为概括或过渡句；[2]易被误选因涉及研究，但该空需概括睡眠对学习的整体价值，而非午睡的具体数据案例。
