11-19 第二篇

Earthquake Safety: How to Stay Safe When the Ground Shakes

Earthquakes happen when two sections of Earth's crust suddenly move past each other. They can occur almost anywhere, though some regions—such as the Pacific "Ring of Fire"—experience them more often. Earthquakes cannot be predicted exactly, but scientists can identify areas that are at higher risk. When an earthquake strikes, the ground may shake for only a few seconds or for more than a minute. The shaking can cause buildings to collapse, roads to crack, and landslides to occur. [1] Understanding how earthquakes work and how to prepare for them can greatly reduce the danger and save lives when the ground begins to move.

The first rule during an earthquake is to protect yourself immediately. If you are indoors, "Drop, Cover, and Hold On" is the recommended approach. Drop to your hands and knees, take cover under a strong desk or table, and hold on until the shaking stops. Stay away from windows, heavy furniture, and objects that might fall. If you are outdoors, move to an open area away from buildings, trees, and power lines. [2] These simple steps, practiced in advance, can make the difference between minor injuries and serious harm when an earthquake occurs.

After the shaking stops, the danger is not over. Aftershocks—smaller earthquakes that follow the main one—are common and can cause further damage. Check yourself and others for injuries. Be careful of broken glass, fallen objects, and gas leaks. If you are in a damaged building, leave calmly and go to a safe outdoor area. [3] In the moments following an earthquake, staying calm and following a clear plan helps you avoid additional risks and assist those who need help.

Before an earthquake, there is a lot you can do to prepare. Have an emergency kit with water, food, a flashlight, a first-aid kit, and important documents. Make a family plan so everyone knows where to meet and how to contact each other if separated. Secure heavy items like bookshelves and TVs to walls so they do not fall during shaking. [4] Good preparation before an earthquake can reduce fear and confusion when it happens, making it easier to respond quickly and correctly.

Earthquakes are a natural part of Earth's activity, and we cannot prevent them. What we can do is learn about them, prepare our homes and families, and know how to react when they occur. Schools and communities often hold earthquake drills to practice the right actions. [5] By taking earthquake safety seriously, we can protect ourselves and our loved ones even when the unexpected happens.

选项

A. Understanding how earthquakes work and how to prepare for them can greatly reduce the danger and save lives when the ground begins to move. B. These simple steps, practiced in advance, can make the difference between minor injuries and serious harm when an earthquake occurs. C. In the moments following an earthquake, staying calm and following a clear plan helps you avoid additional risks and assist those who need help. D. Good preparation before an earthquake can reduce fear and confusion when it happens, making it easier to respond quickly and correctly. E. By taking earthquake safety seriously, we can protect ourselves and our loved ones even when the unexpected happens. F. For instance, Japan conducts regular earthquake drills in schools and offices because the country experiences thousands of tremors each year.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前介绍地震成因、高发区、 unpredictability、震时现象及危害，空后需总结了解与准备的意义。A的"Understanding how earthquakes work and how to prepare"与前文科普与应对呼应，"greatly reduce the danger and save lives"点明主题价值。
- **[2] B**：
  - **线索**：空前描述震时应对——室内"Drop, Cover, Hold On"、避开危险物、室外到开阔地等，空后需总结这些步骤的重要性。B的"These simple steps, practiced in advance"与前文具体步骤对应，"make the difference between minor injuries and serious harm"强调提前演练的意义。
- **[3] C**：
  - **线索**：空前说明震后风险——余震、检查伤情、警惕碎玻璃、燃气泄漏、有序撤离等，空后需总结震后应对要点。C的"In the moments following an earthquake"承接震后情境，"staying calm and following a clear plan"概括冷静与预案的作用。
- **[4] D**：
  - **线索**：空前列举震前准备——应急包、家庭计划、固定重物等，空后需总结准备的作用。D的"Good preparation before an earthquake"与前文准备内容对应，"reduce fear and confusion... respond quickly and correctly"说明准备带来的心理与行动优势。
- **[5] E**：

- **线索**：空前指出地震不可防但可防、可学可练，提及学校社区演练，空后需收束全文。E的"By taking earthquake safety seriously"总结全文态度，"protect ourselves and our loved ones even when the unexpected happens"是全文的收尾升华。

- **干扰项分析**：
  - **F. For instance, Japan conducts regular earthquake drills in schools and offices because the country experiences thousands of tremors each year.**：以For instance开头，为具体国家演练案例（日本）。各空均为概括或过渡句；[4]易被误选因涉及演练，但该空需总结震前准备的整体作用，而非单一国家的演练实例。
