11-25 第一篇

Virtual Reality: Stepping into New Worlds

Virtual reality, or VR, lets people enter computer-generated worlds through special headsets. When you put on a VR headset, you can look around and feel as if you are inside a different place—a game, a museum, or even a distant planet. VR is used not only for games but also for education, training, and even medical treatment. Doctors can practice surgery in virtual environments; students can explore ancient Rome without leaving the classroom. [1] Virtual reality opens doors to experiences that would be impossible or difficult in the real world, making it a powerful tool for learning, training, and entertainment alike.

VR technology works by showing each eye a slightly different image, creating a sense of depth. Motion sensors track your head and sometimes your hands, so when you turn or move, the virtual world reacts. This makes the experience feel immersive—you feel present in the virtual space. The quality of VR has improved a lot in recent years: sharper images, lighter headsets, and more realistic movement. [2] By combining visual depth, motion tracking, and ever-improving hardware, VR creates an immersive experience that feels real enough to transport users into entirely new environments.

VR has many practical uses. In schools, students can take virtual field trips to oceans, space, or historical sites. Pilots and soldiers train in simulators that mimic real situations without real danger. Therapists use VR to help people overcome fears, such as fear of heights or flying. Architects and designers can walk through buildings before they are built. [3] From education to healthcare to industry, VR is proving to be a versatile tool that solves real problems and enhances the way we learn, work, and heal.

At the same time, VR raises some concerns. Spending too much time in virtual worlds can affect how people relate to the real world. Some users feel dizzy or uncomfortable after using VR. There are also questions about privacy—what data is collected when people use VR—and whether children should have limited access. Like any technology, VR needs to be used wisely. [4] As VR becomes more common, we must balance its benefits with careful attention to health, privacy, and responsible use, especially for young users.

The future of VR is still unfolding. We may see more mixed reality—where virtual and real worlds blend—and lighter, more affordable devices. VR could change how we meet, work, and learn from a distance. [5] As technology continues to improve, virtual reality will likely play an even greater role in how we experience, learn, and connect with the world around us—both real and digital.

选项

A. Virtual reality opens doors to experiences that would be impossible or difficult in the real world, making it a powerful tool for learning, training, and entertainment alike. B. By combining visual depth, motion tracking, and ever-improving hardware, VR creates an immersive experience that feels real enough to transport users into entirely new environments. C. From education to healthcare to industry, VR is proving to be a versatile tool that solves real problems and enhances the way we learn, work, and heal. D. As VR becomes more common, we must balance its benefits with careful attention to health, privacy, and responsible use, especially for young users. E. As technology continues to improve, virtual reality will likely play an even greater role in how we experience, learn, and connect with the world around us—both real and digital. F. For example, many museums now offer VR tours that allow visitors to explore exhibits from the comfort of their homes.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前介绍VR——通过头显进入计算机生成世界，可环顾并仿佛身处游戏、博物馆或遥远星球，用于游戏、教育、训练及医疗，医生可在虚拟环境中练习手术、学生可不出教室探索古罗马，空后需概括VR开启难以在现实中获得的体验的价值。A的"opens doors to experiences that would be impossible or difficult in the real world"与前文"as if you are inside a different place"呼应，"powerful tool for learning, training, and entertainment"与前文教育、训练、医疗、游戏对应。
- **[2] B**：
  - **线索**：空前说VR技术原理——为每眼显示略有不同的图像形成深度感，运动传感器追踪头及手部使虚拟世界随之反应，带来沉浸感，近年画质更清晰、头显更轻、动作更真实，空后需总结视觉深度、动捕与硬件改进共同营造的沉浸体验。B的"By combining visual depth, motion tracking, and ever-improving hardware"与前文各项技术对应，"immersive experience that feels real enough to transport users"与"feel present in the virtual space"呼应。
- **[3] C**：
  - **线索**：空前列举VR应用——学校虚拟实地考察海洋太空历史，飞行员与士兵在模拟器中训练，治疗师用VR帮助克服恐高或恐飞，建筑师与设计师可在建筑建成前“走进”设计，空后需总结VR在教育、医疗、产业等多领域的 versatile 作用。C的"From education to healthcare to industry"与前文各领域呼应，"versatile tool that solves real problems and enhances the way we learn, work, and heal"与各项应用对应。

- [4] D：
  - **线索**：空前说VR的担忧——过多时间在虚拟世界可能影响与现实的关联，部分用户产生头晕或不适，隐私与数据收集、儿童使用限制等问题，技术需谨慎使用，空后需总结在VR普及中平衡益处与健康、隐私及负责任使用。D的"As VR becomes more common"与前文"raises some concerns"呼应，"balance its benefits with careful attention to health, privacy, and responsible use, especially for young users"与前文各项担忧对应。
- [5] E：
  - **线索**：空前说VR未来——混合现实、更轻更实惠的设备、可能改变远程会议工作学习方式，空后需总结技术改善下VR在体验、学习、联结中的更大角色。E的"As technology continues to improve"与前文"quality of VR has improved"和"lighter, more affordable"呼应，"play an even greater role in how we experience, learn, and connect"与"change how we meet, work, and learn"对应，是合理收尾。
- **干扰项分析**：
  - **F. For example, many museums now offer VR tours that allow visitors to explore exhibits from the comfort of their homes.**：以For example开头，为博物馆VR导览的具体案例。各空均为概括或过渡句；[1]或[3]易被误选因涉及教育或博物馆应用，但该空需概括VR整体价值或应用领域，而非某一具体服务举例。
