# 04-02 第二篇

**The Amazing World of Hummingbirds**

Hummingbirds are among the smallest birds in the world, yet they are known for their incredible abilities. There are over 300 species of hummingbirds, and most of them live in the Americas. [1] Their wings can beat up to 80 times per second, which creates the humming sound that gives these birds their name. This rapid wing movement allows them to hover in mid-air, fly backward, and even upside down—something few other birds can do.

One reason hummingbirds need so much energy is their extremely fast metabolism. Their hearts beat about 1,200 times per minute when they are active. [2] To survive, they must eat almost constantly, visiting hundreds of flowers each day to drink nectar. A hummingbird might consume up to twice its body weight in food every day.

Hummingbirds have a special relationship with flowers. As they feed on nectar, they also help pollinate the plants. [3] The long, slender beak of a hummingbird fits perfectly into tube-shaped flowers, while the bird's tongue can extend to reach the sweet liquid inside. In return, many flowers have evolved bright red or orange colors, which hummingbirds can see clearly, while bees often struggle with these colors.

Migration is another remarkable aspect of hummingbird life. Some species travel thousands of kilometers each year. [4] It makes a non-stop flight of about 800 kilometers across the Gulf of Mexico—a journey that takes roughly 20 hours. This is one of the most demanding migrations in the bird world.

[5] Whether you plant flowers that attract them or simply observe them in nature, these tiny birds never fail to inspire wonder. Protecting their habitats and the plants they depend on helps ensure that future generations can enjoy their beauty.

## 选项

A. In fact, watching hummingbirds has become a popular hobby for many bird lovers. B. To sum up, hummingbirds remind us that great wonders often come in small packages. C. Their unique flying skills come from an extraordinary wing structure and speed. D. One species that amazes scientists is the ruby-throated hummingbird, which performs an extraordinary annual journey. E. As a result, they cannot go more than a few hours without eating, even at night. F. Such a partnership benefits both the bird and the plant.

## 答案键（Answer Key）

[1] C [2] E [3] F [4] D [5] B

## 深度解析

- [1] C：
  - **线索**：主题引入与逻辑递进。空前介绍蜂鸟种类与分布，空后详细描述"Their wings can beat up to 80 times per second...hover...fly backward...upside down"。C选项"Their unique flying skills come from an extraordinary wing structure and speed"（它们独特的飞行能力源于非凡的翅膀结构与速度）自然引出空后对翅膀频率和飞行方式的具体描述，"wing structure and speed"与"wings can beat...80 times per second"形成总—分衔接。
- [2] E：
  - **线索**：因果衔接与语义对应。空前描述蜂鸟心跳极快（约1200次/分钟）、代谢旺盛。E选项"As a result, they cannot go more than a few hours without eating, even at night"（因此，它们即使夜间也无法超过几小时不进食）用"As a result"承接前文代谢快之因，"cannot go more than a few hours without eating"与空后"must eat almost constantly...visiting hundreds of flowers each day"完美呼应，逻辑链完整。
- [3] F：
  - **线索**：承上启下与指代衔接。空前指出蜂鸟吸食花蜜时帮助植物传粉。F选项"Such a partnership benefits both the bird and the plant"（这种伙伴关系使鸟与植物双方受益）中"Such a partnership"指代前文传粉互惠关系，空后"The long, slender beak...fits perfectly into tube-shaped flowers"则具体描述实现该伙伴关系的身体适应—— beak 与花的形态匹配，前后形成"关系—机制"衔接。
- [4] D：
  - **线索**：例证引入与语义呼应。空前指出部分蜂鸟每年迁徙数千公里，空后描述"It makes a non-stop flight of about 800 kilometers across the Gulf of Mexico..."。D选项"One species that amazes scientists is the ruby-throated hummingbird, which performs an extraordinary annual journey"（令科学家惊叹的物种之一是红喉蜂鸟，它每年进行非同寻常的迁徙）用"One species"承接"Some species"，直接点出红喉蜂鸟，空后"It"指代该物种并具体描述其跨墨西哥湾 800 公里不停歇飞行的壮举，"extraordinary annual journey"与"non-stop flight...800 kilometers"语义一致，逻辑连贯。
- [5] B：
  - **线索**：全文收束与主题升华。空[5]位于结尾段段首，前文已从飞行、代谢、花蜜互惠、迁徙多角度介绍蜂鸟。B选项"To sum up, hummingbirds remind us that great wonders often come in small packages"（总之，蜂鸟提醒我们伟大的奇迹往往以小身躯呈现）用"To sum up"总结全文，"small packages"呼应蜂鸟体型小

却能力非凡的主题，自然过渡到空后"Whether you plant flowers...or simply observe...these tiny birds never fail to inspire wonder"及保护栖息地的呼吁。

- **干扰项分析**：
  - **A. In fact, watching hummingbirds has become a popular hobby for many bird lovers.**：含"hummingbirds""watching""observe"等关键词，可能与空[5]后"observe them in nature"产生关联。但A聚焦"popular hobby"（观鸟爱好），而空[5]段落重心在"inspire wonder"与"protecting their habitats"——呼吁欣赏与保护，而非 hobby 的流行。且A若填[5]会与后文"Whether you plant flowers...or simply observe"逻辑不连贯，缺乏"To sum up"式的总结升华。属"语义相近但重心偏移"型干扰。 正在修正第二篇的选项逻辑，确保 [4] 有合适的迁移相关选项。 <｜tool▁calls▁begin｜><｜tool▁call▁begin｜> StrReplace
