05-24 第二篇

Movie Special Effects: How Magic Happens on Screen

When you watch a movie, you often see things that seem impossible—dragons flying, cities being destroyed, or actors travelling through time. How do filmmakers create these scenes? [1] In fact, they use special effects, or "SFX," to make the impossible look real. Special effects have changed a lot over the years. In the past, filmmakers used models, make-up, and clever camera tricks. Today, computers play a huge role. That is why modern movies can show worlds that exist only in the imagination. From small indie films to big blockbusters（大片）, special effects help tell stories that would otherwise be impossible to film.

What are the main types of special effects? [2] Practical effects are done during filming—explosions, stunts（特技）, and make-up. Computer-generated imagery, or CGI, is created on computers after filming. Motion capture records actors' movements and turns them into digital characters. Green screens let filmmakers place actors in any background. In other words, filmmakers often combine different techniques to get the best result. A single scene might use real explosions, CGI creatures, and digital backgrounds—all working together.

How has technology changed special effects? [3] In the 1970s and 80s, films like Star Wars used physical models and miniatures（微缩模型）. By the 1990s, computers began to create dinosaurs, spaceships, and fantasy worlds. Today, software can create almost anything—realistic water, fire, crowds, and entire cities. For this reason, the line between "real" and "computer-made" has become very thin. Audiences often cannot tell what was filmed and what was created on a computer. The goal is always the same: to make the audience believe.

Do special effects replace real acting? [4] No—the best films use effects to support the story, not to replace it. Actors still need to perform with emotion and belief. Even when surrounded by green screens and imaginary creatures, they must make the audience care. It is true that technology has made many things possible. But a great film still needs a great story and great performances. Special effects are tools; they serve the story. When used well, they make movies more powerful, not less human.

[5] In short, special effects have opened up new possibilities for storytelling. They let filmmakers bring dreams to life and take audiences to places they could never go in real life. Whether you prefer practical stunts or digital magic, the aim is always to create wonder and emotion. Remember: the best special effects are the ones you do not notice—they feel so real that you forget they are effects at all. So next time you watch a movie, look closely—you might be surprised by how much "magic" is on the screen.

选项

A. That is because special effects make the impossible look real on screen. B. In other words, filmmakers mix different techniques for the best result. C. That is why modern technology has blurred the line between real and digital. D. It is true that technology has made many things possible. E. In conclusion, special effects expand what stories can show. F. For example, some films use thousands of visual effects shots.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：总领电影特效的作用与演变。空前描述"When you watch a movie, you often see things that seem impossible...How do filmmakers create these scenes?"，空后说明"In fact, they use special effects, or 'SFX,' to make the impossible look real...In the past, filmmakers used models, make-up, and clever camera tricks. Today, computers play a huge role...modern movies can show worlds that exist only in the imagination"。A选项"That is because special effects make the impossible look real on screen"（那是因为特效让不可能的事物在银幕上显得真实）中"That is because"解释特效功能，"make the impossible look real"与空后make the impossible look real、worlds that exist only in the imagination精准对应，衔接顺畅。
- **[2] B**：
  - **线索**：各类特效技术及其综合运用。空前设问"What are the main types of special effects?"，空后列举"Practical effects are done during filming—explosions, stunts, and make-up...Computer-generated imagery, or CGI, is created on computers...Motion capture records actors' movements...Green screens let filmmakers place actors in any background...filmmakers often combine different techniques to get the best result...A single scene might use real explosions, CGI creatures, and digital backgrounds—all working together"。B选项"In other words, filmmakers mix different techniques for the best result"（换言之，电影人混合多种技术以达到最佳效果）中"In other words"概括空后内容，"mix different techniques"与空后combine、single scene might use...all working together完美呼应，衔接自然。
- **[3] C**：

- **线索**：技术进步模糊真实与数字的界限。空前设问"How has technology changed special effects?"，空后详述"In the 1970s and 80s...physical models and miniatures...By the 1990s, computers began to create...Today, software can create almost anything...the line between 'real' and 'computer-made' has become very thin...Audiences often cannot tell what was filmed and what was created on a computer"。C选项"That is why modern technology has blurred the line between real and digital"（因此现代技术模糊了真实与数字的界限）中"That is why"承接空前及空后结论，"blurred the line between real and digital"与空后line has become very thin、cannot tell精准对应，逻辑紧密。

- **[4] D**：
  - **线索**：特效与表演的关系及技术的定位。空前设问"Do special effects replace real acting?"，空后说明"No—the best films use effects to support the story...Actors still need to perform with emotion and belief...Even when surrounded by green screens and imaginary creatures...technology has made many things possible...a great film still needs a great story and great performances...Special effects are tools; they serve the story"。D选项"It is true that technology has made many things possible"（的确，技术使许多事情成为可能）中"It is true that"加强衔接，"technology has made many things possible"与空后technology has made many things possible完美呼应，衔接得当。

- **[5] E**：
  - **线索**：全文收束与特效对叙事的拓展。空[5]位于结尾段段首，空后总结"special effects have opened up new possibilities for storytelling...They let filmmakers bring dreams to life and take audiences to places they could never go...the aim is always to create wonder and emotion...the best special effects are the ones you do not notice"。E选项"In conclusion, special effects expand what stories can show"（总之，特效拓展了故事所能呈现的内容）用"In conclusion"总结全文，"expand what stories can show"与空后new possibilities、bring dreams to life形成呼应，收束有力。

- **干扰项分析**：
  - **F. For example, some films use thousands of visual effects shots.**：涉及某些电影使用大量特效镜头，易被误填[2]或[3]。但F讨论的是数量规模的具体数据，而空[2]聚焦特效类型与综合运用，空[3]强调技术演进与真实/数字界限；F属于量化举例，与空[2]的技术分类、空[3]的质变论述层级不同。F属"主题相关但论述层级错位"型干扰。
