05-25 第一篇

Antarctic Research: Science in the World's Coldest Place

Antarctica is the coldest, windiest, and driest continent on Earth. It is covered in ice, and for most of the year, it is dark. Yet scientists from many countries go there every year to conduct research. Why? [1] In fact, Antarctica holds answers to some of the most important questions about our planet. The ice contains a record of Earth's climate going back hundreds of thousands of years. The ocean around Antarctica affects weather and sea levels worldwide. That is why understanding Antarctica is key to understanding climate change and the future of our planet. Research there helps us all.

What do scientists study in Antarctica? [2] They drill into the ice to get ice cores（冰芯）—long tubes of ice that show how the climate has changed over time. They study penguins, seals, and whales to learn how life survives in extreme conditions. They measure the speed at which ice is melting and how it affects sea levels. They also observe the ozone layer（臭氧层）and cosmic rays（宇宙射线）because the clear, dry air makes it easier to see. In other words, Antarctica is like a giant laboratory. Scientists from many fields work together to uncover its secrets.

What is life like at a research station? [3] Researchers live in bases that can withstand（经受）extreme cold and strong winds. They work in teams and must be prepared for emergencies—storms can last for days, and help is far away. In summer, the sun never sets; in winter, it never rises. For this reason, living in Antarctica is both a scientific challenge and a human one. Scientists need not only knowledge but also courage, patience, and teamwork. Many say that working there changes them for life.

How is Antarctica protected? [4] The Antarctic Treaty（南极条约）, signed by many nations, keeps Antarctica for peace and science only. No country can claim the land for itself. Mining and military activities are banned. Scientists must follow strict rules to protect the environment and wildlife. It is true that protecting Antarctica requires international cooperation. As the climate warms, the ice is changing—and so is the need for more research and better protection. The future of Antarctica affects us all.

[5] In short, Antarctic research is vital for our planet's future. The work is hard and the conditions are extreme, but the knowledge gained helps us understand climate change, protect wildlife, and plan for the future. Whether it is studying ancient ice or counting penguins, every project adds to our understanding. Remember: Antarctica may be far away, but what happens there matters to everyone. So the next time you hear about Antarctic research, remember—those scientists are working for all of us, in one of the toughest places on Earth.

选项

A. That is because Antarctica holds vital clues about Earth's climate and future. B. In other words, Antarctica is a unique place for many kinds of research. C. That is why working in Antarctica demands both skill and character. D. It is true that protecting Antarctica requires international cooperation. E. In conclusion, Antarctic research is essential for our planet. F. For example, some scientists spend a whole year at the South Pole.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：总领南极研究的价值和意义。空前描述"Antarctica is the coldest, windiest, and driest continent...Yet scientists from many countries go there every year to conduct research. Why?"，空后说明"In fact, Antarctica holds answers to some of the most important questions about our planet...The ice contains a record of Earth's climate going back hundreds of thousands of years...Understanding Antarctica is key to understanding climate change and the future of our planet"。A选项"That is because Antarctica holds vital clues about Earth's climate and future"（那是因为南极洲掌握着地球气候与未来的重要线索）中"That is because"解释研究动机，"vital clues about Earth's climate and future"与空后holds answers、climate record、key to understanding climate change精准对应，衔接顺畅。
- **[2] B**：
  - **线索**：南极研究的多种内容与综合价值。空前设问"What do scientists study in Antarctica?"，空后列举"They drill into the ice to get ice cores...They study penguins, seals, and whales...They measure the speed at which ice is melting...They also observe the ozone layer and cosmic rays...Antarctica is like a giant laboratory...Scientists from many fields work together"。B选项"In other words, Antarctica is a unique place for many kinds of research"（换言之，南极洲是开展多种研究的独特场所）中"In other words"概括空后内容，"unique place for many kinds of research"与空后ice cores、penguins、ice melting、ozone layer、many fields完美呼应，衔接自然。
- **[3] C**：
  - **线索**：科考站生活对研究者能力与品格的要求。空前设问"What is life like at a research station?"，空后详述"Researchers live in bases that can withstand extreme cold and strong winds...They work in teams and must be prepared for emergencies...living in Antarctica is both a scientific challenge and a human

one...Scientists need not only knowledge but also courage, patience, and teamwork"。C选项"That is why working in Antarctica demands both skill and character"（因此在南极工作既需要技能也需要品格）中"That is why"承接空前及空后结论，"both skill and character"与空后knowledge、courage、patience、teamwork精准对应，逻辑紧密。

- [4] D：
  - **线索**：南极保护机制与国际合作。空前设问"How is Antarctica protected?"，空后说明"The Antarctic Treaty, signed by many nations, keeps Antarctica for peace and science only...Mining and military activities are banned...Scientists must follow strict rules to protect the environment and wildlife...protecting Antarctica requires international cooperation...As the climate warms, the ice is changing...the need for more research and better protection"。D选项"It is true that protecting Antarctica requires international cooperation"（的确，保护南极需要国际合作）中"It is true that"加强衔接，"international cooperation"与空后Treaty、many nations、strict rules完美呼应，衔接得当。
- [5] E：
  - **线索**：全文收束与南极研究的重要性。空[5]位于结尾段段首，空后总结"Antarctic research is vital for our planet's future...the knowledge gained helps us understand climate change, protect wildlife, and plan for the future...Antarctica may be far away, but what happens there matters to everyone...those scientists are working for all of us"。E选项"In conclusion, Antarctic research is essential for our planet"（总之，南极研究对我们的星球至关重要）用"In conclusion"总结全文，"essential for our planet"与空后vital、matters to everyone形成呼应，收束有力。
- **干扰项分析**：
  - **F. For example, some scientists spend a whole year at the South Pole.**：涉及科学家在南极点度过一整年，易被误填[3]或[5]。但F讨论的是驻留时长的具体案例，而空[3]聚焦科考生活的挑战及对品格的要求，空[5]强调研究对全人类的意义；F属于个案举例，与空[3]的挑战分析、空[5]的宏观价值论述层级不同。F属"主题相关但论述层级错位"型干扰。
