05-31 第一篇

Ocean Plastic Recycling: Turning Waste into Resources

Plastic waste in the ocean is a serious problem. Millions of tons of plastic end up in the sea every year. It harms marine life, pollutes beaches, and breaks down into tiny pieces called microplastics（微塑料）that enter the food chain. Yet some people and companies are working to turn ocean plastic into something useful. [1] That is because recycling ocean plastic can reduce pollution and create new products. Boats and nets collect plastic from the sea. Workers sort, clean, and process the plastic into pellets（颗粒）that factories can use to make new items. Some brands now make shoes, clothes, and bottles from recycled ocean plastic. In short, ocean plastic recycling shows that waste can become a resource. It is one way to fight pollution while supporting a circular economy（循环经济）.

Where does ocean plastic come from? [2] In other words, most of it comes from land. Rain and rivers carry plastic bags, bottles, and packaging from streets and landfills（垃圾填埋场）into the ocean. Fishing nets and ropes lost at sea also add to the problem. In some regions, waste is dumped directly into rivers or the sea. Once plastic enters the ocean, currents（洋流）carry it far and wide. Some plastic washes up on beaches; more floats in giant garbage patches（垃圾带）in the Pacific and other oceans. Understanding where plastic comes from helps us prevent it from reaching the sea in the first place. Stopping the flow of plastic is as important as cleaning it up.

How is ocean plastic recycled? [3] That is why the process is more complex than recycling clean household plastic. Ocean plastic is often dirty, salty, and mixed with other materials. It must be washed, sorted by type, and sometimes mixed with new plastic to strengthen it. Special machines shred（切碎）the plastic into small pieces before melting and reforming it. Because ocean plastic has been exposed to sunlight and salt, its quality can be lower than new plastic. For this reason, recycled ocean plastic is often used for products that do not need to be very strong—like shoes, clothing, or packaging. New technology is improving the process every year. Scientists are finding better ways to recycle even the most damaged plastic.

Who is involved in ocean plastic recycling? [4] It is true that NGOs, companies, and governments all play a role. Non-profit groups organize beach clean-ups and collect plastic from coastal areas. Some companies fund ocean clean-up projects and use the recycled plastic in their products. Governments can pass laws to reduce single-use plastic and support recycling programs. Consumers also matter—when people buy products made from recycled ocean plastic, they encourage more companies to invest in this work. Together, these groups are building a system that turns ocean waste into useful products. The fight against ocean plastic needs everyone's effort.

[5] In conclusion, ocean plastic recycling is a promising solution to a global problem. It reduces waste in the sea, creates new products, and raises awareness about plastic pollution. While recycling alone cannot solve the problem—we also need to produce and use less plastic—it is an important step forward. So the next time you see a product made from "ocean plastic," remember: that item might have been floating in the sea. Let us support recycling and work toward a cleaner ocean for all.

选项

A. That is because recycling ocean plastic can reduce pollution and create new products. B. In other words, most of it comes from land. C. That is why the process is more complex than recycling clean household plastic. D. It is true that NGOs, companies, and governments all play a role. E. In conclusion, ocean plastic recycling is a promising solution to a global problem. F. For example, some volunteers collect plastic bottles from beaches every weekend.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：总领海洋塑料回收的价值与目的。空前描述"Plastic waste in the ocean is a serious problem...Yet some people and companies are working to turn ocean plastic into something useful"，空后说明"Boats and nets collect plastic from the sea...Workers sort, clean, and process the plastic into pellets...Some brands now make shoes, clothes, and bottles from recycled ocean plastic...ocean plastic recycling shows that waste can become a resource"。A选项"That is because recycling ocean plastic can reduce pollution and create new products"（那是因为回收海洋塑料能减少污染并创造新产品）中"That is because"解释回收意义，"reduce pollution and create new products"与空后collect、process、make shoes/clothes精准对应，衔接顺畅。
- **[2] B**：
  - **线索**：海洋塑料的来源——多来自陆地。空前设问"Where does ocean plastic come from?"，空后列举"Rain and rivers carry plastic bags, bottles, and packaging from streets and landfills into the ocean...Fishing nets and ropes lost at sea also add to the problem...In some regions, waste is dumped directly into rivers or the sea...currents carry it far and wide...Understanding where plastic comes from helps us prevent it"。B选项"In other words, most of it comes from land"（换言之，大部分来自陆地）中"In other words"概括空后来

源，"comes from land"与空后rain and rivers carry、streets and landfills、dumped into rivers完美呼应，衔接自然。

- [3] C：
  - **线索**：海洋塑料回收的复杂性与挑战。空前设问"How is ocean plastic recycled?"，空后详述"Ocean plastic is often dirty, salty, and mixed with other materials. It must be washed, sorted by type, and sometimes mixed with new plastic...Because ocean plastic has been exposed to sunlight and salt, its quality can be lower than new plastic...recycled ocean plastic is often used for products that do not need to be very strong"。C选项"That is why the process is more complex than recycling clean household plastic"（因此该流程比回收清洁的家庭塑料更复杂）中"That is why"承接空前及空后结论，"more complex"与空后dirty, salty, mixed、quality can be lower精准对应，逻辑紧密。
- [4] D：
  - **线索**：参与海洋塑料回收的主体—— NGOs、企业、政府。空前设问"Who is involved in ocean plastic recycling?"，空后说明"Non-profit groups organize beach clean-ups...Some companies fund ocean clean-up projects and use the recycled plastic in their products...Governments can pass laws to reduce single-use plastic...Consumers also matter...Together, these groups are building a system"。D选项"It is true that NGOs, companies, and governments all play a role"（的确，非政府组织、企业和政府都发挥作用）中"It is true that"引出参与主体，"NGOs, companies, and governments"与空后Non-profit groups、companies、Governments完美呼应，衔接得当。
- [5] E：
  - **线索**：全文收束与海洋塑料回收的意义。空[5]位于结尾段段首，空后总结"ocean plastic recycling is a promising solution to a global problem...It reduces waste in the sea, creates new products, and raises awareness about plastic pollution...it is an important step forward...Let us support recycling and work toward a cleaner ocean"。E选项"In conclusion, ocean plastic recycling is a promising solution to a global problem"（总之，海洋塑料回收是应对全球问题的可行方案）用"In conclusion"总结全文，与空后首句完全一致，收束有力。
- **干扰项分析**：
  - **F. For example, some volunteers collect plastic bottles from beaches every weekend.**：涉及志愿者海滩捡塑料瓶，易被误填[2]或[4]。但F仅为单一志愿者行为举例，而空[2]需概括塑料来源（来自陆地），空[4]需概括多方参与主体（NGOs、企业、政府）；F属"具体案例但与段落主旨层级不符"型干扰。
