06-04 第一篇

The Evolution of the Piano

The piano is one of the most popular instruments in the world. From concert halls to school classrooms, its beautiful sound has touched millions of people. [1] But few people know that the piano has a rich history of over 300 years, and it has changed greatly since it was first invented. Understanding this history helps us appreciate not only the music it makes, but also the creativity and skill of the people who built it.

The first piano was invented around 1700 by Bartolomeo Cristofori in Italy. Before the piano, people played the harpsichord（羽管键琴）, which could not play loud or soft—every note had the same volume. [2] Cristofori wanted to create an instrument that allowed musicians to control the dynamics, or how loud and soft each note could be. He called his invention "pianoforte," which means "soft-loud" in Italian. This new ability to play with different dynamics changed music forever and made the piano much more expressive than earlier keyboards.

Over the next two centuries, piano makers improved the instrument in many ways. [3] They made the frame stronger so it could hold thicker strings, which produced a richer and louder sound. They added more keys—early pianos had about 60 keys, while modern pianos have 88. The pedals we use today to sustain or soften notes were also developed during this time. Each improvement made the piano more powerful and more suitable for large concert halls.

In the 20th century, new technologies brought more changes. [4] The electric piano and later the digital piano allowed people to play with headphones, practice silently, or perform in places where a large acoustic piano would not fit. Today, you can find pianos in almost every style—from grand pianos in theatres to small electronic keyboards in homes. The piano has adapted to modern life while keeping its place as a beloved instrument.

[5] The piano's journey from a simple idea to a global icon shows how innovation can shape art and culture. It has inspired composers, performers, and learners for generations. Whether you play on an old wooden piano or a modern digital one, you are part of a long and beautiful tradition that continues to grow.

选项

A. In other words, the piano we know today is the result of centuries of creativity and improvement. B. That is because he saw a need for an instrument that could express emotion through varying volume. C. In fact, many technical changes made the piano louder, richer, and more versatile than before. D. This meant that more people could

enjoy and learn the piano, even in small spaces. E. In short, the piano is not just an instrument—it is a story of human ingenuity and passion. F. For example, Mozart and Beethoven wrote some of their greatest works for the piano.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：引出钢琴的历史与演变。空前描述"The piano is one of the most popular instruments...its beautiful sound has touched millions"，空后说明"But few people know that the piano has a rich history of over 300 years...has changed greatly since it was first invented...appreciate the creativity and skill of the people who built it"。A选项"In other words, the piano we know today is the result of centuries of creativity and improvement"（换言之，我们今天所知的钢琴是数百年创造与改良的成果）中"In other words"承接空前知名度与空后历史认知的对比，"centuries of creativity and improvement"与空后"rich history...changed greatly...people who built it"精准呼应，衔接顺畅。
- **[2] B**：
  - **线索**：克里斯托福里发明钢琴的动机。空前说明"Before the piano, people played the harpsichord, which could not play loud or soft"，空后详述"Cristofori wanted to create an instrument that allowed musicians to control the dynamics...called it pianoforte...soft–loud...made the piano much more expressive"。B选项"That is because he saw a need for an instrument that could express emotion through varying volume"（那是因为他看到需要一种能通过变化音量表达情感的乐器）中"That is because"解释发明动机，"express emotion through varying volume"与空后"control dynamics...soft–loud...more expressive"完美对应，逻辑紧密。
- **[3] C**：
  - **线索**：钢琴在19世纪的机械改良。空前提出"Over the next two centuries, piano makers improved the instrument in many ways"，空后列举"made the frame stronger...thicker strings...richer and louder sound...added more keys...60 to 88...pedals...more powerful...suitable for large concert halls"。C选项"In fact, many technical changes made the piano louder, richer, and more versatile than before"（事实上，许多技术改进使钢琴更响亮、音色更丰富、用途更广泛）中"In fact"强化空前改良成果，"louder, richer, more versatile"与空后各具体改进精准对应，衔接自然。

- **[4] D**：
  - **线索**：电子与数字钢琴带来的普及。空前描述"In the 20th century, new technologies brought more changes...electric piano and digital piano...play with headphones, practice silently...perform in places where acoustic piano would not fit"，空后说明"Today, you can find pianos in almost every style...grand pianos...small electronic keyboards...adapted to modern life"。D选项"This meant that more people could enjoy and learn the piano, even in small spaces"（这意味着更多人能在小空间里享受和学习钢琴）中"This meant"承接空前技术变革，"more people...even in small spaces"与空后"headphones...silently...places...would not fit"及"small electronic keyboards"呼应，衔接得当。
- **[5] E**：
  - **线索**：全文收束与升华。空[5]位于结尾段段首，空后总结"journey from simple idea to global icon...inspired composers, performers, learners...part of a long and beautiful tradition"。E选项"In short, the piano is not just an instrument—it is a story of human ingenuity and passion"（简言之，钢琴不仅是乐器——它是人类智慧与热情的故事）用"In short"总结全文，"story of human ingenuity and passion"与空后"innovation...inspired...tradition"呼应，收束精准。
- **干扰项分析**：
  - **F. For example, Mozart and Beethoven wrote some of their greatest works for the piano.**：涉及莫扎特、贝多芬为钢琴创作名曲，易被误填[3]或[1]。但F以"For example"引出作曲家与作品的具体案例，而空[3]前后文讨论的是钢琴机械结构的改良（框架、琴弦、琴键、踏板），并非作曲家创作；空[1]需要的是对钢琴历史演变的概括，F仅涉及作品创作，缺乏"centuries...changed greatly"等演变维度。F属"主题相关但衔接维度错位"型干扰。
