06-29 第一篇

Whales in the Ocean

Whales are among the largest animals on Earth. They live in the ocean but breathe air like us, and they are more closely related to dolphins than to fish. [1] In fact, whales are mammals—they give birth to live young, feed them with milk, and have to surface regularly to breathe. From the huge blue whale, which can grow longer than a bus, to the smaller killer whale that hunts in groups, whales have fascinated humans for centuries. Today, we understand more about their behaviour, but they still hold many secrets. This article explores the lives of these remarkable creatures.

Whales have evolved to live in the sea. [2] Their bodies are streamlined for swimming—smooth, without much hair, and shaped to move through water with less effort. They have a thick layer of fat called blubber（鲸脂）to keep warm in cold oceans. Instead of legs, they have flippers（鳍状肢）and a powerful tail fluke that pushes them forward. Most whales have excellent hearing; they use sounds to communicate, find food, and navigate in the dark depths. Some species can dive hundreds of metres and hold their breath for over an hour. Every part of their body is adapted for life in the water.

Whales travel long distances every year. [3] Many species migrate from cold feeding grounds in summer to warmer breeding waters in winter. A humpback whale may swim thousands of kilometres between its feeding and breeding areas. Mothers travel with their calves, teaching them the routes passed down through generations. Scientists are still learning how whales find their way—they may use the Earth's magnetic field, the sun, or memory of coastline shapes. Migration is exhausting and dangerous, but it is essential for finding food and raising young. These journeys connect different parts of the ocean ecosystem.

Whales face serious threats from human activity. [4] In the past, whaling（捕鲸）reduced many populations to near extinction. Today, whaling is limited by international law, but other dangers remain. Ship strikes can injure or kill whales. Underwater noise from ships and oil drilling can disturb their communication and navigation. Plastic and other trash in the ocean can be eaten by mistake or entangle whales. Climate change is altering ocean temperatures and food supplies. Many countries and organisations now work to protect whales through sanctuaries, speed limits for ships, and rules against pollution. Conservation efforts are slowly helping some populations recover.

[5] Whales connect us to the ocean's past and remind us of our responsibility to protect it. They have survived for millions of years, but their future depends on the choices we make today. By learning about whales, supporting conservation, and reducing ocean pollution, we can help ensure that these magnificent animals continue to swim in our

seas for generations to come. The next time you think of the ocean, remember the whales—and the fragile world they call home.

选项

A. In fact, whales are mammals—they give birth to live young, feed them with milk, and have to surface regularly to breathe. B. Whales have streamlined bodies, blubber for warmth, flippers and tail flukes for swimming, and use sound to communicate and navigate. C. Many whales migrate long distances between feeding and breeding areas, often with their calves, using routes passed down through generations. D. Whaling, ship strikes, noise, plastic, and climate change threaten whales—conservation efforts are helping some populations recover. E. Whales remind us of the ocean's heritage and our duty to protect it—their future depends on our choices today. F. For example, whale songs can be heard over hundreds of kilometres underwater.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前描述"Whales among largest animals...live in ocean but breathe air...more closely related to dolphins than fish"，空后说明"From huge blue whale...to smaller killer whale...fascinated humans centuries...understand more about behaviour...still hold secrets"。A选项"In fact, whales are mammals—they give birth to live young, feed them with milk, and have to surface regularly to breathe"（事实上，鲸鱼是哺乳动物——它们胎生、哺乳、需定期浮出水面呼吸）中"In fact"承接空前，"mammals...live young...milk...surface to breathe"与空前"breathe air"及生物分类精准呼应，衔接顺畅。
- **[2] B**：
  - **线索**：空前提出"Whales have evolved to live in the sea"，空后详述"Bodies streamlined for swimming—smooth, little hair, shaped for less effort...Thick layer fat—blubber—keep warm...Instead legs—flippers, powerful tail fluke...push forward...Excellent hearing...sounds communicate, find food, navigate dark depths...Some dive hundreds metres, hold breath over hour...Every part adapted for water"。B选项"Whales have streamlined bodies, blubber for warmth, flippers and tail flukes for swimming, and use sound to communicate and navigate"（鲸鱼有流线型身体、鲸脂保暖、鳍和尾叶游泳，并用声音交流与导航）中"streamlined...blubber...flippers, tail flukes...sound...communicate, navigate"与空后内容完美对应，逻辑紧密。

- [3] C：
  - **线索**：空前提出"Whales travel long distances every year"，空后列举"Many species migrate...cold feeding grounds summer to warmer breeding winter...Humpback swim thousands kilometres...Mothers with calves...teaching routes passed down generations...Scientists learning how find way—magnetic field, sun, memory coastline...Migration exhausting, dangerous...essential food, raising young...connect ocean ecosystem"。C选项"Many whales migrate long distances between feeding and breeding areas, often with their calves, using routes passed down through generations"（许多鲸鱼在觅食与繁殖地之间长距离洄游，常与幼鲸同行，沿用世代相传的路线）中"migrate long distances...feeding, breeding...calves...routes...generations"与空后内容精准对应，衔接自然。
- [4] D：
  - **线索**：空前提出"Whales face serious threats from human activity"，空后描述"Past—whaling reduced populations near extinction...Today whaling limited by law...other dangers—ship strikes...injure, kill...Underwater noise ships, drilling...disturb communication, navigation...Plastic, trash...eaten, entangle...Climate change...temperatures, food...countries, organisations...sanctuaries, speed limits, pollution rules...Conservation...some populations recover"。D选项"Whaling, ship strikes, noise, plastic, and climate change threaten whales—conservation efforts are helping some populations recover"（捕鲸、船舶撞击、噪音、塑料和气候变化威胁鲸鱼——保护工作正帮助部分种群恢复）中"whaling...ship strikes...noise...plastic...climate...conservation...recover"与空后表述完美对应，衔接得当。
- [5] E：
  - **线索**：空[5]位于结尾段段首，空后为"Whales connect us to the ocean's past and remind us of our responsibility to protect it. They have survived for millions of years, but their future depends on the choices we make today. By learning about whales, supporting conservation, and reducing ocean pollution, we can help ensure that these magnificent animals continue to swim in our seas for generations to come. The next time you think of the ocean, remember the whales—and the fragile world they call home."。E选项"Whales remind us of the ocean's heritage and our duty to protect it—their future depends on our choices today"（鲸鱼提醒我们海洋的遗产和保护它的责任——它们的未来取决于我们今日的选择）用"remind...heritage...duty...future depends on choices"总结主题，与空后"connect...past...responsibility...future depends on choices"形成呼应，收束精准。
- **干扰项分析**：

- **F. For example, whale songs can be heard over hundreds of kilometres underwater.**：涉及鲸歌传播距离，易被误填[2]。但F以"For example"引出鲸歌传播能力，而空[2]讨论鲸鱼的身体结构与适应性（流线型、鲸脂、鳍、声音交流与导航），F的"whale songs...hundreds kilometres"属于交流能力的举例，与空[2]整体论述"body structure...blubber...flippers...sound to communicate and navigate"的焦点不同；F仅为声音功能的一例，论述层次较窄。F属"主题相关但论述层次错位"型干扰。
