07-23 第一篇

How Color Affects Our Mood

Have you ever noticed that being in a blue room makes you feel calm, while a red wall might make you feel more energetic? Colors are all around us, and they have a powerful influence on our feelings and behavior. Scientists have studied this connection for many years. [1] Understanding how colors work can help us create better spaces for learning, working, and relaxing. Let's explore the fascinating world of color psychology together.

Blue is often called the color of peace and trust. [2] When we see blue, our brain tends to relax. Many hospitals and schools use light blue on their walls because it helps people feel less anxious. Students studying in blue rooms often report better focus. Companies that want to appear trustworthy often use blue in their logos and offices. This calming effect makes blue a popular choice for bedrooms as well.

Red, on the other hand, creates a very different response. [3] Red can raise your heart rate and make you feel more alert. Restaurants sometimes use red because it is believed to increase appetite. Sports teams often wear red to appear more powerful. However, too much red can make people feel stressed or angry. It is best used in small amounts to add energy to a space.

Green brings us closer to nature. [4] Green is easy on the eyes and helps reduce fatigue. Looking at green plants or green walls can make us feel refreshed. That is why many offices now have indoor plants. Green also represents growth and new beginnings. Schools that use green in classrooms often find that students feel more relaxed and creative.

Colors are not just decoration—they are tools that shape how we feel every day. [5] By choosing colors wisely in our homes, schools, and workplaces, we can improve our mood and productivity. The next time you paint a room or buy new clothes, think about what feeling you want to create. A little color knowledge can make a big difference in your daily life.

选项

A. This knowledge offers practical benefits for our daily environments. B. It has a calming effect that reduces stress and improves concentration. C. It stimulates excitement and draws attention quickly. D. It promotes relaxation and connects us to natural surroundings. E. We can use this understanding to create better living and working spaces. F. For example, yellow is often associated with happiness and sunshine.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前介绍科学家研究色彩与感觉的关系，空后提出"理解色彩能帮助我们创造更好的空间"，A项"这些知识为日常环境带来实际益处"承上启下，将科学发现与实际应用衔接，语义连贯。
- **[2] B**：
  - **线索**：本段主题为蓝色的 calming 效果，空后列举医院、学校、卧室等使用蓝色的例子，B项强调"镇静作用，减少压力、提高专注"与前文"peace"和后文"less anxious""better focus"完全对应。
- **[3] C**：
  - **线索**：本段对比红色与蓝色，空后描述红色"raise heart rate""increase appetite""appear powerful"，C项"激发兴奋、快速吸引注意"概括红色刺激、警醒的特征，与段内例证一致。
- **[4] D**：
  - **线索**：本段围绕绿色与自然、放松的关系，空后提到"closer to nature""indoor plants""relaxed and creative"，D项"促进放松、与自然环境相连"准确概括段意。
- **[5] E**：
  - **线索**：结尾段总结全文并提出行动建议，空前总述色彩是塑造感受的工具，空后具体建议"choose colors wisely""improve mood and productivity"，E项"运用此理解创造更好的生活和工作空间"呼应结尾号召。
- **干扰项分析**：
  - **F. For example, yellow is often associated with happiness and sunshine.**：以 For example 开头，看似补充例证，但全文结构已按蓝、红、绿三色分段论述，F 引入新颜色 yellow 打乱论述层次，且与各空前后衔接不符，为典型干扰项。
