05-22 第1篇

阅读理解（说明文）

① Chocolate is one of the most popular foods in the world. People in many countries love it. But do you know where chocolate comes from? The story of chocolate begins about 3,000 years ago in Central America. The ancient Mayan people were the first to use the cacao (可可) plant. They made a bitter drink from cacao beans and believed it was a gift from the gods.

② In the 16th century, Spanish explorers took cacao beans back to Europe. At first, chocolate was only for rich people because it was expensive. Later, in the 1800s, people found new ways to make chocolate. A Dutch scientist learned how to turn cacao into a fine powder. A Swiss man mixed chocolate with milk and created milk chocolate. These inventions made chocolate cheaper and more popular around the world.

③ Today, chocolate is made in factories. The process has several steps. First, workers collect ripe cacao pods from trees. The pods are opened to get the beans inside. The beans are then dried in the sun for about a week. Next, they are roasted (烘烤) to bring out the chocolate flavor. After roasting, the beans are crushed into a thick paste. Sugar and milk are added, and the mixture is heated and stirred until it becomes smooth. Finally, the liquid chocolate is poured into molds and cooled to become solid bars.

④ Chocolate has become part of culture in both the East and the West. In Western countries, people often give chocolate as a gift on Valentine's Day. In China, more and more people enjoy chocolate, especially among young people. Chocolate shops and brands from around the world can now be found in Chinese cities. It is a treat that brings people together across cultures.

⑤ Whether you prefer dark chocolate, milk chocolate, or white chocolate, each bite carries a long history. Next time you enjoy a piece of chocolate, remember the journey it has made — from ancient Central America to your hand.

注释： cacao 可可；roast 烘烤；mold 模具
