阅读理解（议论文）

① **Should Handwritten Homework Be Replaced by Typing on Computers?**

② Today, more and more students use computers to do their homework. They type instead of writing by hand. Some people say that handwritten homework should be replaced by computer typing because it is faster and tidier. But is this really a good idea? Let us think about both sides.

③ **Those who support computer typing** say that it saves time. Students can type much faster than they write. Their work looks neat (整洁的) and is easy to read. Teachers can also read and mark homework on the computer. Besides, in the future, people will use computers more often at work. Learning to type well is a useful skill. Some students also find that they can correct their mistakes more easily when typing.

④ **Those who support handwriting** believe that writing by hand helps students remember things better. Many studies show that when we write by hand, our brain works harder. This helps us learn and remember. Handwriting also improves our motor skills (动手能力) and patience. In China, we have a long tradition of calligraphy (书法). Beautiful handwriting is still valued. Moreover, not all students have a computer at home. If homework must be typed, it may be unfair to some families.

⑤ **My opinion:** I think we should keep both. Handwriting is important for learning and for our culture. Typing is useful for speed and for future work. Schools could let students handwrite some homework and type others. In this way, students get the best of both worlds. We should not replace handwriting completely — we should use both skills in our daily study.
