05-26 第一篇

Noise Pollution: The Invisible Threat to Our Health

When we think about pollution, we often picture dirty air, polluted water, or plastic waste. But there is another kind of pollution that affects millions of people every day: noise. Traffic, construction, loud music, and even noisy neighbours can make our surroundings unpleasant—and sometimes harmful. [1] In fact, constant exposure to loud noise can damage your hearing over time. It can also cause stress, sleep problems, and difficulty concentrating. That is why noise is more than just an annoyance—it is a real health risk. The World Health Organisation says that noise pollution is one of the top environmental threats to public health in Europe, and the problem is growing in cities worldwide.

Where does noise pollution come from? [2] Road traffic is the biggest source in most cities—cars, buses, and trucks create a steady hum. Construction sites, factories, and airports add to the problem. In homes, loud music, televisions, and household appliances（家用电器）can reach harmful levels. Even schools and hospitals can be noisy. In other words, noise surrounds us in almost every part of modern life. It is hard to escape, especially in crowded cities where space is limited and many people live close together.

What can we do to reduce noise? [3] Governments can set noise limits for roads, construction sites, and factories. They can build noise barriers（隔音屏障）along highways and create quiet zones in parks. Individuals can wear earplugs in loud places, use headphones responsibly, and avoid making unnecessary noise late at night. For this reason, fighting noise pollution needs both public action and personal responsibility. Simple steps—like closing windows facing a busy street or choosing quieter appliances—can make a difference at home.

Why is quiet important for health? [4] Our ears need rest from constant sound. Too much noise can raise stress hormones, increase blood pressure, and disturb sleep. Children may find it harder to learn in noisy classrooms. It is true that we often underestimate the effect of noise on our well-being. Studies show that people who live near busy roads or airports report more health problems. Finding quiet time each day—even a few minutes—can help our minds and bodies recover. So protecting our ears and seeking quiet spaces is part of taking care of ourselves.

[5] In short, noise pollution is a serious issue that we need to take seriously. It affects our hearing, our stress levels, and our quality of life. Whether we live in a busy city or a quiet village, we can all take steps to reduce noise and protect our health. Remember: your ears cannot "close"—they are always listening. So the next time you turn up the volume or hear construction outside, think about the impact. A quieter environment is a healthier one, for everyone.

选项

A. That is because noise pollution can harm both your hearing and your health. B. In other words, noise comes from many sources in modern life. C. That is why reducing noise needs both public and personal efforts. D. It is true that we often underestimate the effect of noise on our well-being. E. In conclusion, noise pollution is a serious health issue worth addressing. F. For example, some cities have "quiet hours" at night in residential areas.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：总领噪音污染对健康的危害。空前描述"When we think about pollution, we often picture dirty air, polluted water...But there is another kind of pollution that affects millions of people every day: noise"，空后说明"In fact, constant exposure to loud noise can damage your hearing over time...It can also cause stress, sleep problems, and difficulty concentrating...noise is more than just an annoyance—it is a real health risk...noise pollution is one of the top environmental threats to public health"。A选项"That is because noise pollution can harm both your hearing and your health"（那是因为噪音污染会损害听力与健康）中"That is because"解释噪音危害，"harm both your hearing and your health"与空后damage hearing、cause stress、health risk精准对应，衔接顺畅。
- **[2] B**：
  - **线索**：噪音污染的来源。空前设问"Where does noise pollution come from?"，空后列举"Road traffic is the biggest source in most cities...Construction sites, factories, and airports add to the problem...In homes, loud music, televisions, and household appliances can reach harmful levels...Even schools and hospitals can be noisy...noise surrounds us in almost every part of modern life"。B选项"In other words, noise comes from many sources in modern life"（换言之，噪音源自现代生活的多种渠道）中"In other words"概括空后内容，"many sources in modern life"与空后traffic、construction、factories、airports、homes完美呼应，衔接自然。
- **[3] C**：
  - **线索**：减少噪音需要政府与个人共同努力。空前设问"What can we do to reduce noise?"，空后详述"Governments can set noise limits...build noise

barriers...create quiet zones...Individuals can wear earplugs...use headphones responsibly...avoid making unnecessary noise...fighting noise pollution needs both public action and personal responsibility...Simple steps...can make a difference at home"。C选项"That is why reducing noise needs both public and personal efforts"（因此减少噪音需要公共与个人的共同努力）中"That is why"承接空前及空后结论，"both public and personal efforts"与空后Governments、Individuals、both public action and personal responsibility精准对应，逻辑紧密。

- **[4] D**：
  - **线索**：安静对健康的重要性及对噪音影响的忽视。空前设问"Why is quiet important for health?"，空后说明"Our ears need rest from constant sound...Too much noise can raise stress hormones, increase blood pressure, and disturb sleep...we often underestimate the effect of noise on our well-being...Studies show that people who live near busy roads or airports report more health problems...Finding quiet time each day...can help our minds and bodies recover"。D选项"It is true that we often underestimate the effect of noise on our well-being"（的确，我们常低估噪音对身心健康的影响）中"It is true that"加强衔接，"underestimate the effect"与空后often underestimate完美呼应，衔接得当。
- **[5] E**：
  - **线索**：全文收束与噪音污染的严重性。空[5]位于结尾段段首，空后总结"noise pollution is a serious issue that we need to take seriously...It affects our hearing, our stress levels, and our quality of life...we can all take steps to reduce noise and protect our health...your ears cannot 'close'—they are always listening...A quieter environment is a healthier one"。E选项"In conclusion, noise pollution is a serious health issue worth addressing"（总之，噪音污染是值得重视的严肃健康问题）用"In conclusion"总结全文，"serious health issue worth addressing"与空后serious issue、protect our health形成呼应，收束有力。
- **干扰项分析**：
  - **F. For example, some cities have "quiet hours" at night in residential areas.**：涉及城市住宅区夜间"安静时段"，易被误填[3]或[5]。但F讨论的是具体政策案例，而空[3]概括减噪需政府与个人共同行动的多层次措施，空[5]强调噪音影响的普遍性与人人可做的改善；F属于单一措施举例，与空[3]的综合性论述、空[5]的总体呼吁论述层级不同。F属"主题相关但论述层级错位"型干扰。
