08-07 第一篇

Protecting Coral Reefs: A Call for Action

Coral reefs are often called the "rainforests of the sea" because they support about a quarter of all marine species. These colorful underwater ecosystems provide food, shelter, and breeding grounds for countless fish and other sea creatures. However, coral reefs around the world are facing serious threats. [1] Rising sea temperatures due to climate change cause corals to lose their vibrant colors and eventually die. Scientists and environmental groups are working together to find solutions before it is too late.

One major threat to coral reefs is ocean pollution. [2] When harmful chemicals and plastic waste flow into the ocean, they damage the delicate balance of reef ecosystems. Fertilizers from farms can cause harmful algae blooms that block sunlight from reaching the corals. Simple actions like reducing plastic use and proper waste disposal can make a real difference in protecting these precious habitats.

Another serious problem is overfishing. [3] Removing too many fish from reef areas disrupts the natural food chain and can lead to the growth of seaweed that competes with coral for space. Many countries have established marine protected areas where fishing is limited or banned, allowing fish populations to recover and reefs to heal.

Tourism also has both positive and negative effects on coral reefs. [4] While tourism brings money that can fund conservation efforts, careless snorkelers and boat anchors can break coral branches. Some resorts now educate visitors about reef etiquette and organize cleanup activities, turning tourists into protectors rather than destroyers.

[5] Every individual can contribute to coral reef protection. Choose reef-safe sunscreen, support sustainable seafood, and reduce your carbon footprint. Small changes in our daily lives add up to big benefits for the oceans we all depend on.

选项

A. This connection between global warming and coral damage requires urgent action. B. We must control what enters our waterways to keep reefs healthy. C. Sustainable fishing practices help maintain the balance of reef life. D. Responsible tourism can become a powerful force for conservation. E. Our personal choices matter more than we might think. F. For example, the Great Barrier Reef has lost over half its coral since 2016.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- [1] A：
  - **线索**：空前介绍珊瑚礁面临严重威胁，空后具体说明海水升温导致白化死亡。A项"全球变暖与珊瑚受损之间的联系需要紧急行动"完美承上（呼应threats）启下（对应climate change与Rising sea temperatures），概括了因果衔接。
- [2] B：
  - **线索**：本段主题为海洋污染，主题句后需概括"污染如何影响珊瑚礁"。B项"我们必须控制进入水道的物质以保持珊瑚礁健康"与段首over pollution及chemicals/plastic/fertilizers流入海洋的逻辑一致，强调源头控制。
- [3] C：
  - **线索**：段首点明overfishing，后文提及disrupts food chain、marine protected areas、fish populations recover。C项"可持续捕捞有助于维持珊瑚礁生态平衡"与主题句及解决方向一致。
- [4] D：
  - **线索**：段中对比旅游业的正负效应，结尾提到educate visitors、turn tourists into protectors。D项"负责任的旅游可以成为保育的强大力量"概括了本段从问题到积极转变的论述逻辑。
- [5] E：
  - **线索**：结尾段以[5]开头，后文列举个人可做之事（sunscreen、seafood、carbon footprint）。E项"我们的个人选择比我们想象的更重要"总领全段，强调个人行动的意义。
- **干扰项分析**：
  - **F. For example...**：以For example开头，虽与珊瑚礁受损主题相关，但仅为单一案例数据，与任一段落的承上启下或概括功能不符，论述层次错位，易被误选于[1]或[3]。
