08-23 第一篇

Polar Ice Melting: A Global Warning

The polar regions are often called the "refrigerators" of our planet. They hold massive amounts of ice that help regulate Earth's temperature and weather patterns. Over the past few decades, scientists have observed an alarming trend: ice in the Arctic and Antarctica is melting at an unprecedented rate. [1] This loss of ice affects not only the poles but also people and wildlife across the globe. Understanding why it happens and what we can do is urgent for our future.

The main cause of polar ice melting is global warming. Human activities, especially burning fossil fuels, release large amounts of greenhouse gases into the atmosphere. [2] These gases trap heat from the sun and cause the average temperature of the Earth to rise. As the air and ocean warm, ice that has existed for thousands of years begins to break apart and melt. The process is faster in the Arctic, but Antarctica's ice sheets are also at risk.

When polar ice melts, sea levels rise. Coastal cities and island nations face the threat of flooding. [3] Millions of people may have to leave their homes as shorelines disappear. Wildlife such as polar bears and penguins lose their habitats and struggle to find food. Fisheries are affected as ocean currents and temperatures change. The impacts reach far beyond the frozen regions themselves.

Scientists warn that some changes may already be irreversible. [4] Even if we stop emitting greenhouse gases today, it would take decades for the climate to stabilize. However, slowing down emissions can still prevent the worst outcomes. Every year we delay action makes the problem harder to solve. The window for meaningful change is narrowing, but it is not yet closed.

[5] We all have a role to play in protecting our planet. Reducing energy use, choosing sustainable transport, and supporting policies that limit carbon emissions can make a difference. Young people can raise awareness in their communities and push leaders to act. The fate of the polar ice is connected to the choices we make today.

选项

A. The effects of melting ice extend worldwide, threatening both human communities and ecosystems. B. These gases increase Earth's temperature by preventing heat from escaping into space. C. Rising seas and changing climates put coastal populations and many species at serious risk. D. Reversing the damage will take a long time, but reducing emissions can still limit future harm. E. Individual actions and collective pressure can

help slow climate change and protect the poles. F. For example, the Arctic has lost more than 40% of its summer sea ice since 1980.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前描述南北极冰快速融化；空后强调“理解原因和应对措施对未来至关重要”。A项“冰雪融化的影响波及全球，威胁人类社区和生态系统”承接上文现象，概括其全球性影响，起承上启下作用。
- **[2] B**：
  - **线索**：空前讲燃烧化石燃料释放温室气体；空后说“随着大气和海洋变暖，存在数千年的冰开始破裂融化”。B项“这些气体通过阻挡热量散逸而使地球升温”准确解释温室效应机制，与前后逻辑一致。
- **[3] C**：
  - **线索**：空前讲海平面上升、沿海城市和岛国面临洪水威胁；空后列举数百万人口流离失所、极地动物失去栖息地、渔业受影响等。C项“海平面上升和气候变化使沿海居民和众多物种面临严重风险”概括本段多重后果。
- **[4] D**：
  - **线索**：空前指出部分变化可能已不可逆；空后写即使立即停止排放也需数十年才能稳定，但减缓排放仍能避免最坏结果。D项“逆转损害需要很长时间，但减少排放仍能限制未来危害”准确概括段内对比与结论。
- **[5] E**：
  - **线索**：空前为第四段；空后具体建议节能、选择可持续交通、支持减排政策，以及年轻人提高意识、推动行动。E项“个人行动和集体压力有助于减缓气候变化、保护极地”作为结尾段主题句，总结全文行动导向。
- **干扰项分析**：
  - **F. For example, the Arctic has lost more than 40% of its summer sea ice since 1980.**：以For example开头，为具体数据举例。虽与极地冰融主题直接相关，但属细节支撑，无法承担[1]–[5]的概括或递进功能；易被误选为[1]或[3]。
