12-07 第一篇

Polar Bears: Giants of the Arctic

Polar bears are the largest land carnivores in the world. They live in the Arctic, where snow and ice cover the landscape for most of the year. Their thick white fur helps them blend in with the snow and stay warm in freezing temperatures. Under their fur, they have black skin that absorbs heat from the sun. These adaptations make them perfectly suited for life in the cold. [1]

Polar bears hunt mainly seals, which provide the fat and protein they need to survive. They wait at breathing holes in the ice or swim silently toward their prey. A single seal can feed a bear for days. In summer, when the ice melts, some bears go without food for long periods. They rely on stored fat to get through the lean season. [2]

Climate change is the biggest threat to polar bears. Sea ice is melting earlier and forming later each year. Bears need the ice to hunt seals and to travel between areas. With less ice, they have to swim farther and spend more energy. Some bears have starved or drowned when they could not find enough food or resting spots. [3]

Scientists and governments are working to protect polar bears. Some areas are set aside as reserves where hunting is limited or banned. Research helps us understand how bears are affected by changes in their habitat. Reducing carbon emissions can slow the loss of sea ice and give bears a better chance to survive. [4]

Polar bears are a symbol of the Arctic and of the need to act on climate change. Their fate is linked to the health of the ice and the ocean. By protecting polar bears, we also protect the entire Arctic ecosystem and the planet we share. [5]

选项

A. In this way, polar bears are built to thrive in one of the harshest environments on Earth. B. For this reason, hunting success is essential for their survival through the changing seasons. C. As a result, many polar bears face a shrinking habitat and a growing struggle to find food. D. These efforts offer hope that polar bears can continue to live in the wild. E. That is why saving polar bears matters far beyond the Arctic itself. F. For example, a polar bear can smell a seal from more than a kilometre away.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- [1] A：
  - **线索**：空前介绍北极熊体型最大陆生食肉动物、栖息北极、厚白毛 camouflage 与保暖、黑皮肤吸热、适应极寒，空后需总结身体结构与极地生活的契合。A的"In this way"承接前文，"built to thrive in one of the harshest environments"与前文adaptations 对应。
- [2] B：
  - **线索**：空前说主要猎食海豹、在冰洞守候或潜泳接近、一只海豹可维持多日、夏季冰融时长期禁食、靠存储脂肪度过，空后需总结狩猎成功与季节生存的关系。B的"For this reason"承接前文，"hunting success is essential for their survival through the changing seasons"与前文对应。
- [3] C：
  - **线索**：空前说气候变化是最大威胁、海冰提早融化推迟形成、熊依赖冰面猎 seal 与迁徙、冰少则需长泳、能耗增加、有熊饿死或溺亡，空后需总结栖息地收缩与觅食困难。C的"As a result"承接前文，"shrinking habitat and a growing struggle to find food"与前文呼应。
- [4] D：
  - **线索**：空前说科学家与政府保护工作——设立保护区限制狩猎、研究栖息地影响、减碳排放减缓冰融，空后需总结这些努力的意义。D的"These efforts"指代前文，"offer hope that polar bears can continue to live in the wild"与前文对应。
- [5] E：
  - **线索**：空前说北极熊象征北极与气候行动需求、命运与冰洋健康相连、保护北极熊即保护整个北极生态与地球，空后需总结保护北极熊的全球意义。E的"That is why saving polar bears matters far beyond the Arctic itself"与前文呼应。
- **干扰项分析**：
  - **F. For example, a polar bear can smell a seal from more than a kilometre away**：以For example开头，为具体感官能力案例（嗅觉距离）。各空均为概括或过渡句；[2]易被误选因涉及狩猎，但该空需总结狩猎成功与季节生存的关系，而非补充嗅觉细节。
