# 12-21 第一篇

**Light Pollution: When Night Loses Its Darkness**

When you look up at the night sky from a city, how many stars can you see? For most city dwellers, the answer is very few. Street lamps, billboards, and building lights glow around the clock, washing out the darkness. This excess of artificial light is called light pollution. It affects not only our view of the stars but also wildlife, human health, and the environment. [1]

Many animals depend on natural patterns of light and dark. Birds that migrate at night can become confused by bright city lights and crash into buildings. Sea turtle hatchlings, which normally find the ocean by moving toward the lighter horizon, may head toward inland lights instead and never reach the water. Insects swarm around street lamps and die, disrupting food chains. Even plants can be affected—some trees near constant lights keep their leaves longer, which can harm them in winter. [2]

Humans are also impacted. Our bodies have internal clocks that rely on darkness to produce melatonin, a hormone that helps us sleep. Too much artificial light at night can disrupt this rhythm, leading to sleep problems, fatigue, and even a higher risk of some health conditions. People who work night shifts or live in brightly lit areas often report worse sleep quality. [3]

Solutions exist. Cities can use "dark sky" friendly lighting—shielded lamps that point downward instead of upward, warmer-colored lights that are less disruptive, and timers that turn lights off when they are not needed. Some communities have created dark sky reserves where people can still enjoy a natural starry night. Individuals can also help by turning off unnecessary lights at home and choosing outdoor lights that do not glare into the sky. [4]

Reducing light pollution does not mean living in darkness. It means using light wisely—where we need it, when we need it, and in ways that do not harm the night. [5]

## 选项

A. Light pollution is a growing problem that hides the beauty of the night sky and has far-reaching effects on life on Earth. B. For these creatures, artificial light can mean danger, disorientation, and sometimes death. C. As a result, reducing unnecessary light at night is not just about aesthetics—it is about health. D. With thoughtful choices, we can enjoy the benefits of light while restoring darkness where it belongs. E. The goal is to light our lives without dimming the natural wonder of the night. F. For example, the city of Tucson, Arizona has adopted strict lighting rules that have significantly reduced sky glow and made stars more visible.

# 答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

# 深度解析

- **[1] A**：
  - **线索**：空前从城市观星引入、多数市民看不到几颗星、路灯广告建筑灯光全天亮、冲淡黑暗、这种过多人造光即光污染、影响观星、野生动物、健康与环境，空后需总结光污染的综合影响。A的"hides the beauty of the night sky and has far-reaching effects on life on Earth"与前文呼应。
- **[2] B**：
  - **线索**：空前说许多动物依赖自然明暗、夜迁鸟类被城市亮光迷惑撞楼、海龟幼体本向较亮地平线找海可能误向内陆灯光、昆虫扑灯死亡打乱食物链、植物也受影响，空后需总结人造光对生物的危害。B的"For these creatures"指代前文，"artificial light can mean danger, disorientation, and sometimes death"与前文对应。
- **[3] C**：
  - **线索**：空前说人类也受影响、体内生物钟依赖黑暗产生褪黑素助眠、夜间过多人工光扰乱节律、导致睡眠问题疲劳甚至健康风险、夜班或亮区居民常报睡眠差，空后需总结减少夜间光与健康的关系。C的"As a result"承接前文，"reducing unnecessary light at night is not just about aesthetics—it is about health"与前文呼应。
- **[4] D**：
  - **线索**：空前说有解决方案、城市可用暗空友好照明、 shielded 灯向下、暖色光、定时关灯、有的社区建暗空保护区、个人可关不必要的灯选不向天照的户外灯，空后需总结明智用光与恢复黑暗。D的"With thoughtful choices"与前文对应，"enjoy the benefits of light while restoring darkness where it belongs"与前文呼应。
- **[5] E**：
  - **线索**：空前说减少光污染不是活在黑暗中、而是明智用光、需要时、需要处、以不损害黑夜的方式，空后需总结目标。E的"The goal is to light our lives without dimming the natural wonder of the night"与前文对应。
- **干扰项分析**：
  - **F. For example, the city of Tucson, Arizona has adopted...**：以For example开头，为具体城市案例。各空均为概括或过渡句；[4]易被误选因涉及城市措施，但该空需总结 thoughtful choices 与恢复黑暗的平衡，而非补充某市规则的细节。
