12-25 第二篇

Plant-Based Medicine: Nature's Pharmacy

Long before modern pharmacies existed, people turned to plants for healing. Today, about one in four prescription drugs comes from or was inspired by compounds found in plants. Aspirin, for example, was derived from willow bark. Many cancer treatments use chemicals first discovered in plants. This legacy of plant-based medicine continues as scientists search rain forests, coral reefs, and traditional knowledge for new compounds that might treat disease. [1]

Traditional healers around the world have used plants for centuries. Indigenous peoples, in particular, hold deep knowledge of local flora—which plants treat fever, soothe pain, or aid digestion. This knowledge has often been passed down orally through generations. Modern researchers sometimes work with these communities to understand and test plant remedies, though ethical questions about ownership and benefit-sharing remain important. [2]

Not all plant medicine is safe without guidance. Some plants are poisonous if used incorrectly. Dosage, preparation, and interactions with other drugs matter greatly. What works in traditional settings may need careful study before use in modern medicine. For this reason, it is important to consult healthcare providers before using herbal supplements, especially if you take other medications or have health conditions. [3]

Conservation is another concern. Overharvesting and habitat loss threaten many medicinal plants. Some species have become rare or endangered. Sustainable harvesting, cultivation of medicinal plants, and protecting natural habitats can help preserve these resources. When we lose a plant species, we may lose potential medicines we have not yet discovered. [4]

Plant-based medicine sits at the crossroads of ancient wisdom and modern science. By respecting traditional knowledge, conducting rigorous research, and protecting biodiversity, we can keep discovering the healing power of nature for generations to come. [5]

选项

A. Plants have been a source of healing for millennia, and they continue to inspire and supply modern medicine. B. This knowledge represents a precious resource that, when respected and partnered with fairly, can benefit both science and communities. C. For this reason, using plant-based remedies safely requires expertise and caution. D. Protecting medicinal plants is thus not only an environmental issue but also a matter of global health and future discovery. E. The future of plant medicine depends on balancing

tradition, science, and stewardship of the natural world. F. For example, the Madagascar periwinkle has yielded compounds used to treat childhood leukemia, saving countless lives since the 1960s.

答案键（Answer Key）

[1] A [2] B [3] C [4] D [5] E

深度解析

- **[1] A**：
  - **线索**：空前说现代药房出现前人即用植物疗愈、约四分之一处方药来自或受植物化合物启发、举阿司匹林与抗癌药为例、植物药学遗产延续、科学家在雨林珊瑚礁与传统知识中寻找新化合物，空后需总结植物作为疗愈来源的古今延续。A的"Plants have been a source of healing for millennia"与前文呼应，"continue to inspire and supply modern medicine"与前文对应。
- **[2] B**：
  - **线索**：空前说世界各地传统医者 centuries 用植物、原住民掌握当地植物知识、何种植物退烧止痛助消化、知识常口口相传、现代研究者有时与社区合作理解与检验、但所有权与惠益分享的伦理问题仍重要，空后需总结传统知识的价值与公平合作。B的"This knowledge represents a precious resource"指代前文，"when respected and partnered with fairly, can benefit both science and communities"与前文呼应。
- **[3] C**：
  - **线索**：空前说并非所有植物药在无指导下安全、有的误用有毒、剂量制备与药物相互作用重要、传统有效者或需严谨研究才能用于现代医学、使用草药补充剂前应咨询医疗人员，空后需总结安全使用需专业与谨慎。C的"For this reason"承接前文，"using plant-based remedies safely requires expertise and caution"与前文对应。
- **[4] D**：
  - **线索**：空前说保育也是关切、过度采集与栖息地丧失威胁许多药用植物、有的 species 变稀少或濒危、可持续采集栽培与保护栖息地可帮助保存、失去植物种可能失去尚未发现的潜在药物，空后需总结保护药用植物不仅是环境问题也是全球健康与未来发现的问题。D的"Protecting medicinal plants is thus not only an environmental issue"与前文呼应。
- **[5] E**：

- **线索**：空前说植物药处于古老智慧与现代科学的交汇、通过尊重传统知识、开展严谨研究、保护生物多样性、可持续发现自然的疗愈力量，空后需总结植物药的未来取决于传统科学与自然管理的平衡。E的"The future of plant medicine depends on balancing tradition, science, and stewardship"与前文对应。

- **干扰项分析**：
  - **F. For example, the Madagascar periwinkle...**：以For example开头，为具体植物药案例（长春花）。各空均为概括或过渡句；[1]易被误选因涉及具体药物来源，但该空需总结植物作为疗愈来源的古今延续，而非补充某种植物的具体疗效细节。
