03-31 第1篇

阅读理解（议论文） Should Our School Plant a Vegetable Garden for Students?

① In the north-east corner of our school, there is a small piece of empty ground. It is about the size of two basketball courts. For years, it has grown only weeds and a few stray cats. Last month, the Students' Union proposed a bold new plan: **turn it into a student vegetable garden**, managed by Grade 7 and Grade 8 students together with biology teachers. Since then, the idea has been carefully, and sometimes warmly, debated.

② Those who **support** the garden give three clear reasons. First, a garden is a **living classroom**. Biology textbooks talk about photosynthesis, soil, and water cycles; a garden lets students **see, touch, and smell** these ideas. A tomato plant teaches more in two months than ten pages of notes. Second, gardening can quietly train **patience and responsibility**. A little tomato needs daily water and a careful eye. A student who cares for a plant for ten weeks, watching it grow from a seedling to a red fruit, will feel proud — and also tired in a good way. Third, the school canteen can use part of the harvest; the other part can be donated to **community elderly homes**, turning the garden into a small bridge between the school and the people who need a bit more care.

③ However, many careful voices also worry. Middle school students are **very busy**. Adding a garden chore may feel like another drop of water in an already full cup. A garden also needs **money and time** — seeds, tools, water pipes, and teachers who understand plants. If the garden is not well managed, it could turn into a weedy mess that makes the school look even worse. Some parents also point out that **not every child enjoys soil** or bends down easily, and forcing them to dig and weed may create unhappy memories of "garden work".

④ I think the best answer is a **carefully designed middle way**. The school does not need to turn the whole empty ground into a garden at once. Let us start with **four small beds** — 2 × 3 metres each. Each Grade 7 and Grade 8 class can adopt one bed as an **"optional" project**, open to students who truly want to try. Teachers of biology can guide the weekly work; students can keep a photo diary and share it on the school newspaper. After one term, the school can collect feedback and decide to make the garden bigger, smaller, or to try a new design.

⑤ Many things in life start on a small piece of empty ground. A middle school garden is not about becoming farmers; it is about **touching a handful of warm soil** and learning that food — like knowledge, friendship, and time — does not come from a shop, but

from patience, care, and sun. Even if only a few students join in the first year, the soft green colour they bring into our corner will make the whole school breathe a little easier.

根据文章内容，选择最佳答案。

1. What is the main question the article discusses?

A. Whether the school should hire more biology teachers.
B. Whether the school should plant a student vegetable garden.
C. Whether the Students' Union should change its leader.
D. Whether the canteen food is healthy.

2. Which of the following is NOT a reason given by supporters?

A. A garden is a living classroom for biology ideas.
B. Gardening trains patience and responsibility.
C. The harvest may be shared with elderly homes.
D. A garden can instantly raise every student's exam score.

3. According to paragraph ③, what do the worried voices say?

A. The students' union knows nothing about plants.
B. Middle school students are already busy, and a garden needs money and time.
C. There is no empty ground in any school in the city.
D. Gardens are forbidden by the city rules.

4. What is the "middle way" suggested by the writer?

A. Turn the whole empty corner into a garden at once.
B. Cancel the idea completely.
C. Start with four small beds as an optional project and check feedback after one term.
D. Let only Grade 9 students manage the garden.

5. What is the writer's main message in the last paragraph?

A. The school should train students to become farmers.
B. Touching a little soil can teach patience, care, and the meaning of food.
C. Empty ground should always stay empty.
D. Only large gardens are meaningful.

答案与解析

1.
【答案】B
【题型】主旨大意题

【定位】第①段末 "turn it into a student vegetable garden"
【解析】议题为是否建校园菜园。A、C、D 非主题。故选 B。

2.
【答案】D
【题型】细节否定题
【定位】第②段三条理由：活教材、耐心责任、社区分享
【解析】"立即提升每位学生成绩"非文中理由，过度。A、B、C 都是。故选 D。

3.
【答案】B
【题型】细节理解题
【定位】第③段学生繁忙 + 开销时间问题
【解析】学生日程紧、资源需求大。A、C、D 无依据。故选 B。

4.
【答案】C
【题型】作者观点题
【定位】第④段 "start with four small beds... collect feedback"
【解析】小规模试点+评估。A、B、D 与作者建议不符。故选 C。

5.
【答案】B
【题型】主旨推断题
【定位】第⑤段 "touching a handful of warm soil... patience, care, and sun"
【解析】触及泥土所启示的生活态度。A、C、D 与主旨不符。故选 B。

词汇注释（超纲词）

- **weed** [n.] 杂草；[v.] 除草
- **seedling** [n.] 幼苗
- **photosynthesis** [n.] 光合作用
