阅读理解（议论文） Should Middle School Students Use AI Chatbots for Homework?

① It is 2027, and in many Chinese middle schools, students can now talk to an **AI chatbot** as easily as to a classmate. Type a maths problem, a science question, or a draft of an English essay, and in a second, a polite robot voice writes a full answer. This new tool is exciting — but it also brings a big question: **should middle school students be allowed to use AI chatbots for homework?**

② People who say **yes** point to clear benefits. First, chatbots are **patient**. They never become angry when a student asks the same question ten times. A shy child who is afraid to raise her hand in class may finally get her doubts answered at 10 p.m. Second, they are **fast**. In the time needed to flip through a thick dictionary, a chatbot can explain a word in six different ways, with examples. Third, they can offer **personalised help** — showing an easy example to a weaker student and a harder one to a quicker student at the same moment.

③ On the other hand, many teachers warn that chatbots can also become a **silent trap**. When students simply **copy** chatbot answers into their notebooks, their brains stop working. They may finish homework in five minutes, but understand almost nothing. In the exam room, where no chatbot is allowed, they are left alone with blank pages. In this way, an "easy tool" may quietly **steal** a student's ability to think.

④ There is also the problem of **mistakes**. AI chatbots sometimes write confidently about things that are not true. They may give a wrong date for a historical event, or a wrong formula for a triangle. A student who believes every answer without checking is like a traveller who trusts a broken map. Being fast is not enough; being **right** still matters, and this is a lesson a chatbot cannot fully teach.

⑤ Some people say we should simply **ban** chatbots for middle school students. Others say we should **open the door wide**. I believe the wiser answer lies in the middle: **use them, but use them thoughtfully**. A student may ask a chatbot to explain a difficult idea, to check the grammar of a paragraph, or to give three new example sentences. But the final thinking, the final writing, and the final learning must come from the student. The chatbot is a **coach**, not a **copier**.

⑥ Schools, too, have a role. They can teach "AI lessons" in which students see how chatbots are built, why they sometimes fail, and how to talk to them well. They can design homework that is hard to copy — personal interviews, classroom presentations, small group experiments, and in-class writing. In this way, AI becomes a friend of

learning, not its enemy. If we are brave and careful together, tomorrow's students will not be defeated by chatbots — they will be strengthened by them.

根据文章内容，选择最佳答案。

1. What main question does the article ask?

A. Should students eat breakfast at school?
B. Should middle school students use AI chatbots for homework?
C. Should schools close their gates at 8 p.m.?
D. Should teachers give more tests?

2. Which is NOT a benefit of chatbots mentioned in paragraph ②?

A. They are patient and never impatient.
B. They answer very fast.
C. They can give personalised help.
D. They automatically wash school uniforms.

3. According to paragraph ③, what is the danger of copying chatbot answers?

A. Students become too busy.
B. Students' brains stop working and they may fail in exam rooms.
C. Students break their phones.
D. Students become better at maths.

4. What problem does paragraph ④ warn about?

A. Chatbots can give wrong answers with great confidence.
B. Chatbots use too much electricity.
C. Chatbots steal money.
D. Chatbots dance too loudly.

5. What is the writer's final view?

A. Ban chatbots completely.
B. Let students copy everything from chatbots.
C. Use chatbots thoughtfully as coaches, not copiers, and design smart homework.
D. Only teachers should use chatbots.

答案与解析

1.
【答案】B
【题型】主旨大意题

【定位】第①段末问题
【解析】讨论初中生是否该用AI做作业。故选 B。

2.
【答案】D
【题型】细节理解题
【定位】第②段三条好处
【解析】文中未提及洗校服。故选 D。

3.
【答案】B
【题型】细节理解题
【定位】第③段 "brains stop working... blank pages"
【解析】思维停滞、考场失守。故选 B。

4.
【答案】A
【题型】细节理解题
【定位】第④段 "wrong date... wrong formula"
【解析】AI可能自信地给出错误答案。故选 A。

5.
【答案】C
【题型】主旨归纳题
【定位】第⑤—⑥段
【解析】把AI当教练，而非抄袭者。故选 C。

词汇注释（超纲词）

- **chatbot** [n.] 聊天机器人
- **personalised** [adj.] 个性化的
- **formula** [n.] 公式
