04-30 第2篇

阅读理解（议论文） Should Traditional Handwriting Still Be Practised in the Age of Typing?

① On most Chinese middle-school mornings, students open their laptops, tap keyboards, and see neat black characters appear on the screen. Homework is typed. Essays are printed. Test answers on many school tablets are uploaded with one finger. In such a **digital world**, some people ask: **should we still spend time practising traditional handwriting, like Chinese calligraphy or tidy English cursive?** Is it just a beautiful but **old-fashioned** skill, or is it still important today?

② Supporters of typing say they are not against beauty, but they argue that **time is short**. A Grade 9 student already has mathematics, science, English, and many other subjects to prepare for. Teaching careful handwriting may take **hundreds of extra hours**. In the future, most people will write with voice input, AI, and touchscreens; why, then, make students practise something they may rarely use? Typing is **faster, clearer**, and can be shared across the world in one click.

③ However, people who defend handwriting have strong arguments, too. First, handwriting is not only a tool; it is also a **cultural art**. **Chinese calligraphy** has been praised for more than two thousand years, from **Wang Xizhi** to modern masters. A handwritten poem on a red Spring Festival scroll, a thank-you card in a teacher's drawer — these are warm pieces of our culture. If no one in our generation can write by hand, who will continue these treasures?

④ Second, science supports handwriting. Several studies, including research at universities in Norway and the United States, have found that **writing by hand activates more parts of the brain** than typing. Students who take notes by hand often remember ideas **better**, because hand movement forces the brain to choose, summarise, and re-shape information. Typing, by contrast, can become a kind of "copy machine": fast, but shallow.

⑤ Third, careful handwriting helps build **patience and calm**. Pressing a pen against paper, waiting for ink to dry, and slowing down one stroke at a time — these small actions train a young mind to sit still. In a world full of pop-up notifications, the handwriting table is a quiet room where thinking can grow. Some schools now use **20 minutes of daily handwriting practice** not to replace typing, but to balance it, like exercise balances sitting.

⑥ Of course, being realistic also matters. We should not demand that students write every paragraph by hand, nor that every homework must be in perfect calligraphy. A sensible path is to **use both**. Long reports, emails, and data tables are best typed. Diaries, thank-you letters, poems, and personal reflections are best **written by hand**. Schools can offer **one weekly hour** of calligraphy or tidy English cursive as an enjoyable class, not a punishment.

⑦ Typing is a bridge to the world; handwriting is a path into ourselves. A fast bridge without a quiet path may lead our generation to places where ideas travel quickly, but feelings are thin. In the age of smooth keyboards and soft-glowing screens, a carefully shaped character in black ink is not old-fashioned — it is, in fact, one of the youngest and bravest things we can still do with a pen.

根据文章内容，选择最佳答案。

1. What is the main question of the article?

A. Whether students should buy laptops.
B. Whether traditional handwriting should still be practised in the age of typing.
C. Whether children should learn to swim.
D. Whether schools should close on Mondays.

2. What do supporters of typing argue?

A. Typing is illegal.
B. Typing is faster, clearer, and saves time that students need for many subjects.
C. Typing is too expensive.
D. Typing destroys the eyes.

3. According to paragraph ④, what does writing by hand do for the brain?

A. It tires the brain out.
B. It activates more parts of the brain and often helps students remember ideas better.
C. It has no effect.
D. It only helps students who are older than 20.

4. Why does the writer think handwriting helps build patience and calm?

A. Because it is always done in the dark.
B. Because it can only be done by old people.
C. Because pressing a pen, waiting for ink, and making careful strokes slow the mind in a helpful way.
D. Because it uses golden pens.

5. What does the writer FINALLY suggest?

A. Use only handwriting at school.
B. Use only typing at school.
C. Use both: type long reports and tables, but write diaries, thank-you letters, and poems by hand, with one weekly class of calligraphy.
D. Give up both and use voice only.

答案与解析

1.
【答案】B
【题型】主旨大意题
【定位】第①段末问题
【解析】键盘时代是否仍需练手写。故选 B。

2.
【答案】B
【题型】细节理解题
【定位】第②段
【解析】打字更快更省时。故选 B。

3.
【答案】B
【题型】细节理解题
【定位】第④段 "activates more parts of the brain"
【解析】手写激活更多脑区、记忆更深。故选 B。

4.
【答案】C
【题型】细节理解题
【定位】第⑤段描述
【解析】一笔一画让人静心。故选 C。

5.
【答案】C
【题型】主旨归纳题
【定位】第⑥—⑦段
【解析】手写打字并用，并开设每周一节书法课。故选 C。

词汇注释（超纲词）

- **calligraphy** [n.] 书法
- **cursive** [adj./n.] 连笔的；连笔体
- **notification** [n.] 通知
