12-27 第1篇

阅读理解（议论文） Should Every Middle School Keep One "Slow-Walk Hour" Each Week?

① On **Wednesday afternoons at 15:30**, after the last regular class, something unusual has been happening at Lihua Middle School for eleven weeks now. From **15:30 to 16:30** — one whole hour — the school opens its two small back gardens, the east running track, and the west willow path, and **invites any student who wishes** to walk — **slowly**, in silence or in quiet pairs, with no phones, no running, no loud groups, no homework in hand. A small chalk sign by the east garden door, written by Mr Qin in his slow teacher handwriting, says simply, *"Walk at the pace of a grandmother. Think at the pace of a cloud."* We call it our **"Slow-Walk Hour"** (慢步一小时). It was started on 13 October 2027 as a small, quiet experiment for Grade-8 Class B only, but by early December, **two Grade-7 classes and one Grade-9 class had quietly joined in. I believe every middle school in China should keep one Slow-Walk Hour each week — 60 minutes, one afternoon, outdoors, optional, silent or quiet, starting this spring term.**

② **The first reason is about eyes.** A Grade-8 student in a typical Chinese city spends, by conservative estimate, **more than 11 hours a day looking at things less than 60 centimetres from her face** — textbooks, exercise books, notebooks, phones, tablets, test papers, whiteboard writing, and canteen trays. The eye, scientists now agree, was not made for this much **close-distance focusing**. Every few days, the eye muscle needs long moments of **far-distance looking** — pine tree tops, hill outlines, cloud edges, street-corner rooftops 300 metres away — to relax the tiny muscle fibres that control the lens. **A Slow-Walk Hour is, quite simply, sixty minutes of honest far-away looking**, and that alone is a small gift to every pair of middle-school eyes in China. Our school's nurse, Ms Fang, told me in the school clinic last week that in the eleven weeks since the Slow-Walk Hour began, the average number of weekly eye-strain headache complaints in 8-B has dropped from 6 per week to 2. **That is a real number, built on nothing more than quiet walking.**

③ **The second reason is about thinking.** Many of us, myself included, used to believe that "thinking well" means **sitting still at a desk with a sharp pencil in hand**. This is only half true. There is another kind of thinking — the kind the poet Ba Jin described when he said the best sentences he ever wrote came to him on slow afternoon walks along the Huangpu River — that only happens when **the body is moving gently and the mind is not being forced**. Teachers at Lihua have begun to notice that students return from Slow-Walk Hour with small quiet ideas about problems they had been stuck on all week: a geometry puzzle suddenly becomes clear; a difficult English composition opens up; a

small argument with a friend is quietly forgiven. The body's slow rhythm, it seems, gives the brain **permission** to rearrange the furniture of the mind. **And a brain that can rearrange itself, quietly, once a week, is a calmer and sharper brain.**

④ **The third reason is about classmates.** Our school has 27 students in one class; we sit together for 6 hours a day, but how often do two Grade-8 girls who do not share a homework table really talk? Almost never. In a noisy classroom, quiet friendships are slow to grow; on a slow garden path, with no phones and no shouting, a gentle sentence between two students carries much further. In the past eleven weeks, I have spoken, for the first proper time, with Lin Ruoxi (the quietest girl in 8-B), Shen Kexin (the train-signal engineer's daughter), and Shi Yifan (whose mother is a sanitation worker). Three real conversations in eleven weeks. That is, for a thirteen-year-old, a small personal miracle. **Slow-Walk Hour is a place where, without any teacher forcing "team-building games", quiet classmates quietly meet each other — and that may be the warmest outcome of all.**

⑤ **Some readers may worry that 60 minutes of walking is wasted study time.** I respectfully disagree. A middle-school week already contains **between 38 and 42 classroom hours** of study. One outdoor walking hour is less than **3% of that week**. If those 60 minutes reduce one eye-strain headache, unlock one stuck homework problem, and begin one quiet friendship, the 60 minutes have repaid themselves many times over. **Good learning is never only the hours at the desk; it is also the hours during which the brain is allowed, gently, not to be at a desk.**

⑥ **Some readers may worry that unsupervised walking is unsafe.** At Lihua, two homeroom teachers are already at the garden gate during every Slow-Walk Hour, **quietly walking too**, not shouting orders. Running is politely discouraged (a soft sign reads, *"Please walk. Running is for the track on Fridays."*). Phones are left in classroom lockers. Three simple rules, eleven weeks, **zero incidents**. Safety, it turns out, grows stronger — not weaker — when a school trusts its students to walk without supervision noise.

⑦ Across China, schools spend millions of yuan each year on complicated health programs, eye-care software, stress-reduction apps, and mindfulness workshops. **A Slow-Walk Hour costs nothing but 60 minutes of a calm willow path and a small handwritten chalk sign.** It does not require a new building, a new subject, a new textbook, or a new test. It requires only the small quiet choice of one teacher, one Wednesday afternoon, to open a garden gate and trust the students to walk slowly and think slowly for one humble hour a week. I believe that quiet choice is available to every middle school in China — from a 27-student class in a small county in Yunnan to a 52-class campus in central Beijing. **Open the gate. Slow the pace. Trust the young. Wait for the hour.** That, I think, is one of the smallest and wisest hours a Chinese middle school can give its students this spring.

注释： Slow-Walk Hour 慢步一小时；eye strain 视疲劳；lens 晶状体；mindfulness 正念；supervision 监督

根据短文内容，选择最佳答案。

1. What is the concrete description of Lihua's "Slow-Walk Hour", and what is the writer's thesis?

A. Slow-Walk Hour is a compulsory one-hour running race every morning for all students.
B. Slow-Walk Hour is a noisy group activity with phones, music, and teacher-led games in the classroom.
C. At Lihua Middle School, from 15:30 to 16:30 every Wednesday afternoon, one whole hour, the school opens its two small back gardens, the east running track, and the west willow path, and invites any student who wishes to walk slowly, in silence or in quiet pairs, with no phones, no running, no loud groups, no homework in hand; a small chalk sign by the east garden door — written by Mr Qin in his slow teacher handwriting — says "Walk at the pace of a grandmother. Think at the pace of a cloud."; it started on 13 October 2027 as a small quiet experiment for Grade-8 Class B only, but by early December two Grade-7 classes and one Grade-9 class had quietly joined in; the writer believes every middle school in China should keep one Slow-Walk Hour each week — 60 minutes, one afternoon, outdoors, optional, silent or quiet — starting this spring term.
D. The Slow-Walk Hour is an early-morning exercise that replaces every other school activity.

2. According to paragraph ②, why is Slow-Walk Hour good for student eyes?

A. Because walking fast gives eyes fresh oxygen and is the only reason for eye health.
B. A Grade-8 student in a typical Chinese city spends, by conservative estimate, more than 11 hours a day looking at things less than 60 cm from her face (textbooks, exercise books, notebooks, phones, tablets, test papers, whiteboard writing, canteen trays); the eye was not made for this much close-distance focusing, and every few days the eye muscle needs long moments of far-distance looking — pine tops, hill outlines, cloud edges, street-corner rooftops 300 m away — to relax the tiny muscle fibres that control the lens; a Slow-Walk Hour is quite simply sixty minutes of honest far-away looking, and Ms Fang the school nurse reported that in the eleven weeks since Slow-Walk Hour began, the average number of weekly eye-strain headache complaints in 8-B has dropped from 6 per week to 2 — a real number built on nothing more than quiet walking.
C. Eyes are helped only by expensive eye-care software bought by the school.
D. The writer does not believe walking has any benefit for the eyes.

3. What "second kind of thinking" does paragraph ③ describe?

A. Thinking well means only sitting absolutely still at a desk with a sharp pencil — no other form exists.
B. The only real thinking happens during long tests with no breaks.
C. Many used to believe that thinking well means sitting still at a desk with a sharp pencil in hand — only half true; there is another kind of thinking, the kind the poet Ba Jin

described when he said the best sentences he wrote came to him on slow afternoon walks along the Huangpu River, which only happens when the body is moving gently and the mind is not being forced; Lihua teachers have begun to notice students return from Slow-Walk Hour with small quiet ideas about problems they had been stuck on — a geometry puzzle suddenly clears, a difficult English composition opens up, a small argument with a friend is quietly forgiven — because the body's slow rhythm gives the brain permission to rearrange the furniture of the mind, and a brain that can rearrange itself quietly once a week is a calmer and sharper brain.
D. The brain rearranges itself only by taking long 8-hour tests.

4. What is the writer's answer to the worry that walking wastes study time?

A. The writer fully agrees and asks the school to cancel Slow-Walk Hour immediately.
B. The writer respectfully disagrees: a middle-school week already contains between 38 and 42 classroom hours of study, so one outdoor walking hour is less than 3% of that week; if those 60 minutes reduce one eye-strain headache, unlock one stuck homework problem, and begin one quiet friendship, the 60 minutes have repaid themselves many times over — because good learning is never only the hours at the desk but also the hours during which the brain is gently allowed not to be at a desk.
C. The writer suggests adding 60 extra classroom hours to replace the walking hour.
D. The writer says only Grade-9 students have enough time for a walking hour.

5. What is the writer's main conclusion?

A. Every middle school should buy expensive stress-reduction apps instead of walking.
B. Slow-Walk Hour is too risky and should not be shared with other schools.
C. Across China, schools spend millions of yuan each year on complicated health programs, eye-care software, stress-reduction apps, and mindfulness workshops, but a Slow-Walk Hour costs nothing but 60 minutes of a calm willow path and a small handwritten chalk sign — it does not require a new building, a new subject, a new textbook, or a new test; it requires only the small quiet choice of one teacher one Wednesday afternoon to open a garden gate and trust the students to walk slowly and think slowly for one humble hour a week; that quiet choice is available to every middle school in China, from a 27-student class in a small county in Yunnan to a 52-class campus in central Beijing — open the gate, slow the pace, trust the young, wait for the hour — one of the smallest and wisest hours a Chinese middle school can give its students this spring.
D. Teachers should walk in front and students should follow in strict order without speaking.

答案与解析

1.
【答案】C

【题型】细节理解题
【定位】第①段
【解析】"周三 15:30–16:30 / 后花园 / 慢如祖母 / 无手机 / 8–B 起 11 周 / 1h/周 / 春季起"直引。A、B、D 均错。故选 C。

2.
【答案】B
【题型】细节理解题
【定位】第②段
【解析】"每日近视 11 小时 / 远眺放松 / 头痛 6→2"直引。A、C、D 均错。故选 B。

3.
【答案】C
【题型】细节理解题
【定位】第③段
【解析】"巴金黄浦散步 / 身体慢动 / 几何突通 / 家具重摆"直引。A、B、D 均错。故选 C。

4.
【答案】B
【题型】细节理解题
【定位】第⑤段
【解析】"38–42 课时 / 1h<3% / 一举多益 / 非桌时亦学"直引。A、C、D 均错。故选 B。

5.
【答案】C
【题型】主旨大意题
【定位】第⑦段
【解析】"万元 App vs 零元柳径 / 只需教师一选择 / 云南 → 北京皆可 / 开门慢步信学生"主旨。A、B、D 均偏离。故选 C。
