中考英语完形填空：学种向日葵

完形填空原文

This spring, our school started a gardening project. Each class was given a small plot of land behind the teaching building. Our class decided to grow sunflowers because they are bright, cheerful, and ***1*** to take care of.

Our biology teacher, Ms. Huang, taught us the basics. She said sunflowers need plenty of sunlight and water, but the soil should not be too ***2*** or the roots will rot. She gave each group a bag of seeds and showed us how to plant them about two centimetres deep.

I was in charge of watering our plot every morning. At first, nothing seemed to happen. I stared at the bare soil and wondered if the seeds were even alive. After about a week, tiny green shoots ***3*** through the surface. I was so excited that I called my classmates to come and see.

Over the following weeks, the shoots grew taller and stronger. We added some fertiliser and pulled out the weeds that competed with the sunflowers for ***4***. It was hard work, especially under the hot sun, but nobody complained. We all wanted our sunflowers to be the tallest in the school.

One morning, I noticed that some leaves had small holes in them. Ms. Huang examined them and said insects were eating the leaves. She taught us to make a natural spray using garlic and water instead of chemical pesticides. "We should protect the ***5*** while growing our plants," she said. I agreed completely.

By June, our sunflowers had grown over a metre tall. Then, one by one, big golden flowers began to ***6***. They were stunning. Each flower head was as large as a dinner plate, and they all faced the sun. Our classmates from other classes came to take photos with them.

The gardening project taught me more than just how to grow plants. It taught me ***7***. You cannot rush a seed to grow. You have to water it, care for it, and wait. Life is the same way — good things take time.

When summer came, the flowers produced seeds. We ***8*** them and saved some for next year's planting. We also roasted some and shared them as snacks. They tasted wonderful — probably because we had grown them ***9***.

I never thought I would enjoy gardening so much. It connected me with nature and gave me a sense of ***10***. I look forward to planting something new next spring.
