中考英语完形填空：学做纸板模型飞机

完形填空原文

Last weekend, my father said he would teach me how to make a model plane from cardboard. I had never tried this before, so I was full of ***1***. Dad found some cardboard boxes in the garage and we started our project.

First, we drew the shape of the plane on the cardboard with a pencil. Dad used a ruler to make sure the lines were ***2***. Then we cut out the pieces carefully with scissors. I had to be very careful not to cut the wrong part. "Take your time," Dad reminded me. "***3*** is more important than speed."

After cutting, we needed to fold the cardboard along the lines. We used a knife to make light cuts so the cardboard could bend ***4***. This step was a bit difficult. My first fold was crooked, but Dad helped me fix it. We repeated the process until we had the main body and two wings.

Next, we stuck the parts together with glue. We had to ***5*** for a few minutes to let the glue dry. During the wait, Dad told me some stories about real planes. I learned that the first airplane was invented by the Wright brothers. That made me even more ***6*** about our little model.

When everything was ready, we painted the plane white and blue. I added a red star on each wing. The model plane looked great! We took it to the park to ***7***. Dad threw it gently and it flew through the air. "Wow! It really works!" I shouted. We flew it again and again. Each time it went ***8*** than before as we learned to throw it better.

Making a cardboard plane is not easy, but it's a lot of ***9***. I want to make a bigger one next time. Maybe I can even try to make a rocket! As Dad said, "When you ***10*** something with your own hands, you understand it better."
